HOW TO MAKE THE MOST OF THIS DOCUMENT

This budget book is intended to provide a clear, understandable financial plan that can be used by the rate paying citizens of the City of El Paso, including the Public Service Board. Inside is a guide for the operating activities for Fiscal Year 2023-2024 (March 1, 2023 to February 28, 2024) broken down as follows:

Introduction:	Message from the President and CEO; El Paso Water (EPWater) Organization Structure; Government Finance Officers Association Distinguished Budget Presentation Award
Community and Utility Profile:	Summary of EPWater's service area system
Strategic Plan:	Summary of Public Service Board's guiding plans
Financial Policies:	Summary of the Water and Wastewater Utility's financial policies
Financial Plan:	Fiscal Year 2023-2024 budget overview of the Water and Wastewater Utility
Capital Improvements:	Summary and project-by-project description of all design, planning, and construction projects intended to create, maintain, or improve Water and Wastewater Utility assets
Operating Budget Detail:	Explicit presentation of each of the Water and Wastewater Utility's subcomponent business units, including FY 2023-2024 approved budgeted appropriations, strategic objectives, and quantifiable performance measures to ensure these goals and objectives are being met
Stormwater Utility:	Review of the goals and objectives for FY 2023-2024, the detail operational budget and the capital improvement budget
Statistical:	Ten-year summary of selected financial water, wastewater, and stormwater system data
Appendix:	Glossary of key terms, an index of acronyms and a detailed schedule of EPWater's operating and maintenance budget account classifications

Complete copies of the Annual Budget, Annual Report(s), Annual Comprehensive Financial Report, Rules and Regulations are available at:

 Hon. Oscar Leeser, Mayor, City of El Paso

Dear Public Service Board Members:

With this letter, I submit for your approval the Fiscal Year 2023-2024 Water, Wastewater, and Reclaimed Water Utility combined operating and capital budget totaling \$859.2 million and the Stormwater Utility operating and capital budget totaling \$95.2 million. The detailed operating and capital budgets have been presented to you for your input, review, and guidance in the public budget workshop held on November 29, 2022. These budgets are consistent with the Board's Strategic Plan and achieve the following key objectives:

- Provide sufficient funding for the operation and maintenance of the system
- Improve water and wastewater plant infrastructure with a necessarily aggressive plan in the next five years to rehabilitate and expand wastewater treatment plants to ensure reliability and capacity to serve a growing community
- Increase and diversify our water resource portfolio to ensure future water supply for the El Paso community for this generation and the next
- Continue to implement and deploy technological advancements that increase efficiencies and improve customer service
- Ensure financial stability while still providing affordable and reliable services to our customers

This year's budget provides the necessary resources to fund these operational and capital needs in providing essential services to our community.

The following are the highlights of the Water, Wastewater, and Reclaimed Water Operations and Capital Budget for FY 2023-24:

- The \$144.3 million operating and maintenance budget represents an increase of \$13.1 million versus last fiscal year's and includes an increase of \$9.3 million in salaries to fund salary increases and adding 58 new positions.

- The capital budget of \$554.1 million includes \$6.4 million for capital equipment and these major projects:
 - \$154.2 million for new construction and the rehabilitation of water and wastewater conveyance infrastructure throughout the city
 - \$185.3 million for improvements to wastewater treatment plants, highlighted by the \$149.2 million for the Robert R. Bustamante Wastewater Treatment Plant
 - \$5.0 million for the meter replacement program, which includes a multi-phase and multi-year initiative to automate meter reading through Radio Frequency with a goal of 20,000 meters this fiscal year

The following are the highlights of the Stormwater Operations and Capital Budget for FY 2023-24:

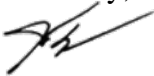

- The \$9.7 million operating budget increased by \$575,000 as compared to last fiscal year due to increases in the indirect cost allocation and maintenance costs
- The capital budget of \$70.6 million includes \$608,000 for capital equipment and the following projects to address the most urgent needs of the system:
 - \$55.5 million for stormwater storage and conveyance projects, including \$5.5 million for the construction of the Will Ruth Pond in Northeast El Paso
 - \$7.6 million for the Americas 10 Watershed Improvements
 - \$8.5 million for Citywide land acquisition needed for projects

Water, Wastewater, and Reclaimed Water Rate and Stormwater Fee Impacts

A typical residential customer will see an increase in their monthly water, wastewater, and stormwater bill of \$9.03.

The FY 2023-24 operating and capital budgets for the Water, Wastewater, Reclaimed Water, and Stormwater reflects increases in operational and capital costs due to challenges with rising inflation, labor shortages, and supply chain issues but still reflects the Utility's commitment to providing the highest services at an affordable rate/fee to our customers while maintaining financial stability.

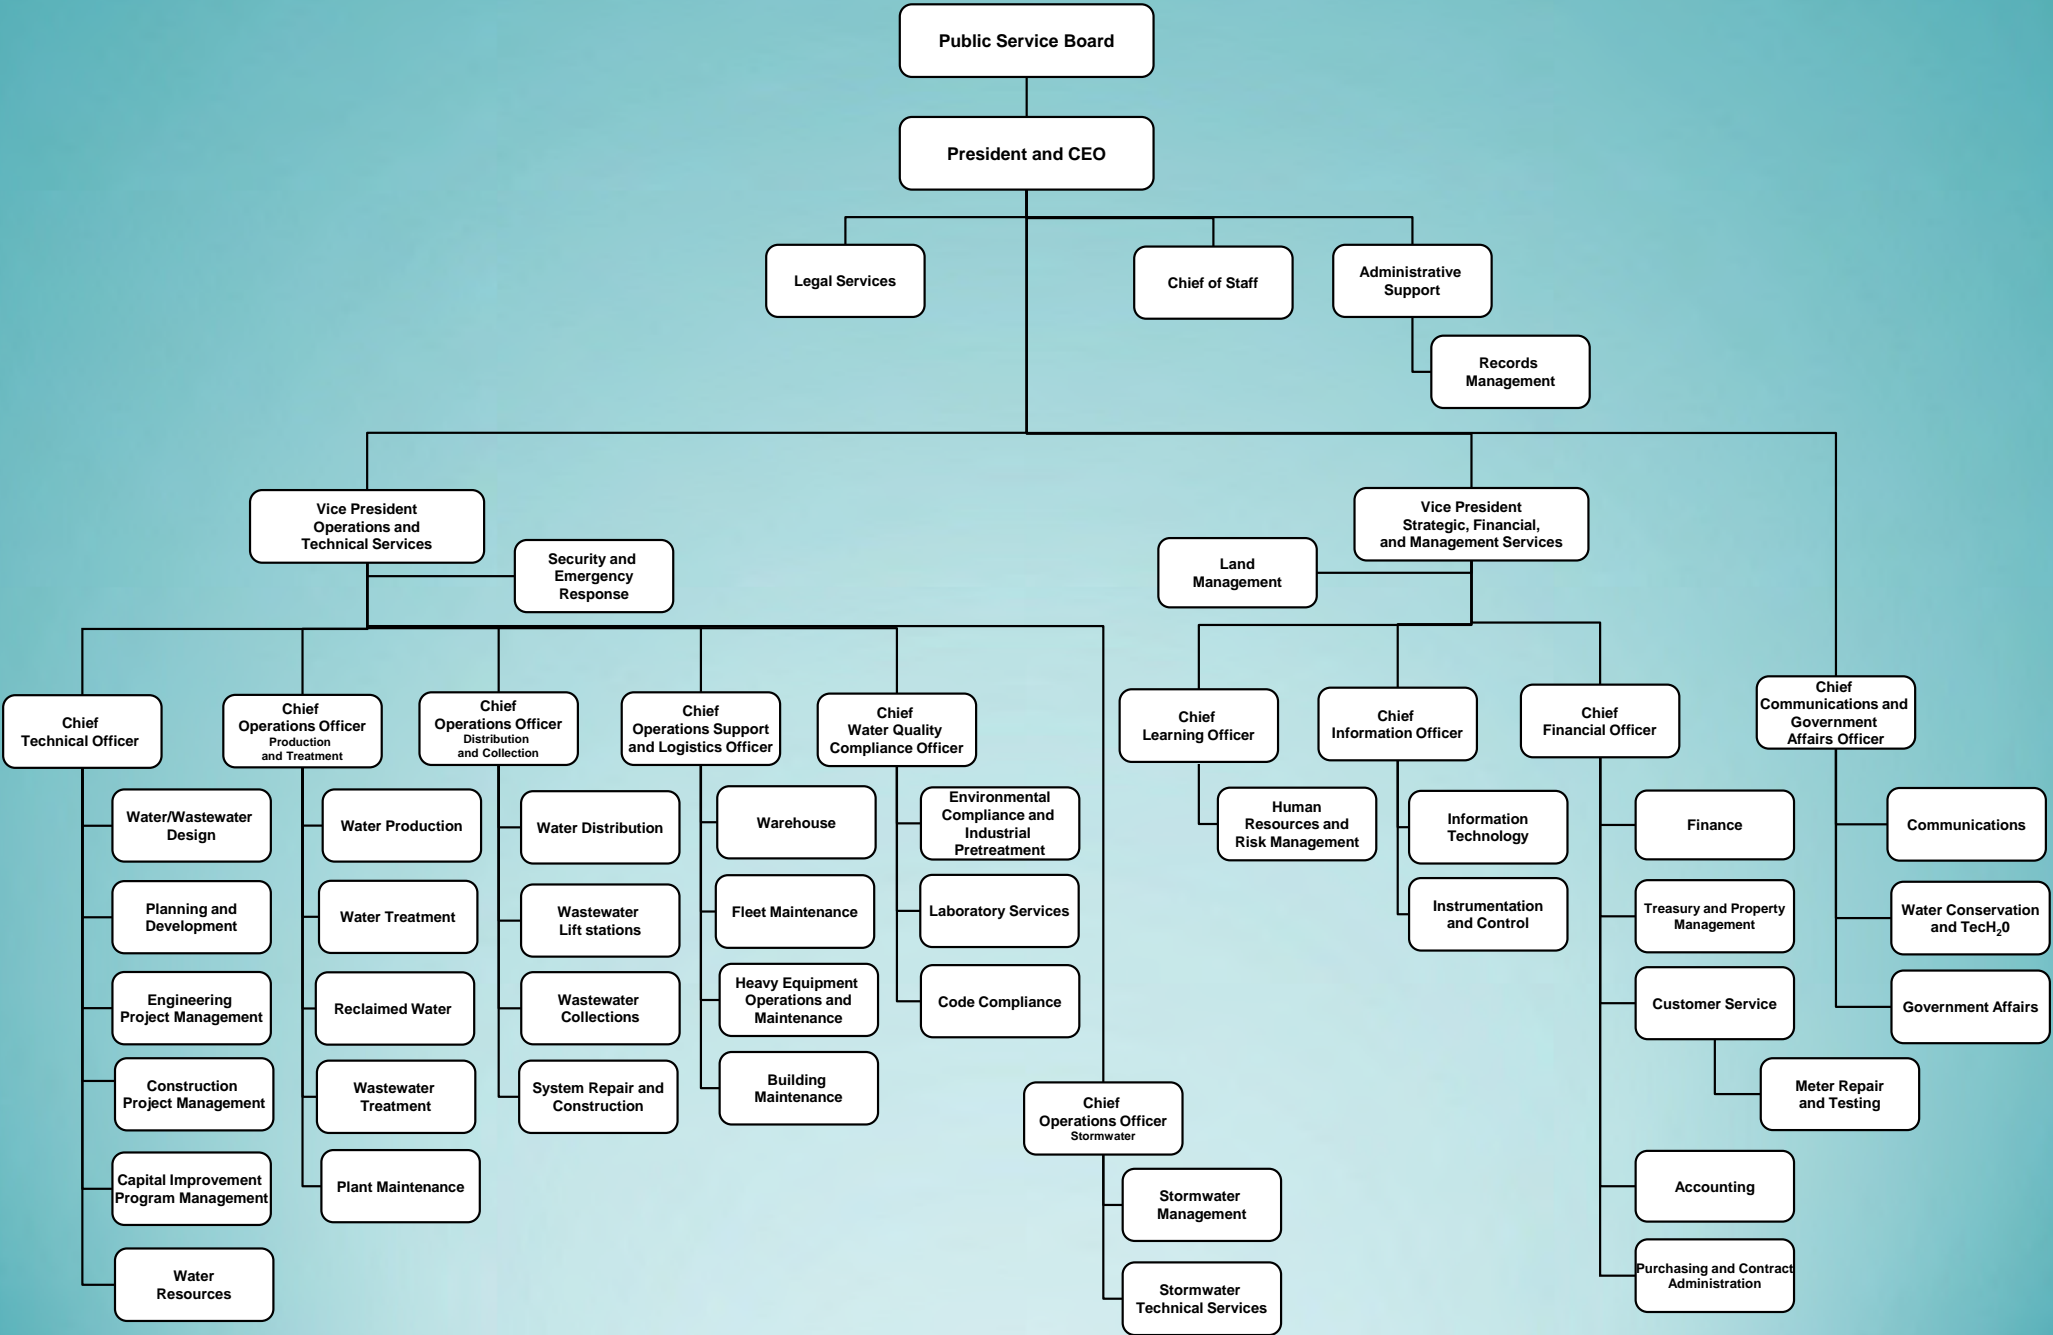

Sincerely,

John E. Balliew, P.E.

SERVICE AREA PROFILE

GEOGRAPHY, HISTORY AND CLIMATE

The city of El Paso, the sociopolitical center of El Paso County and West Texas, has a distinct culture, climate, and resource supply. El Paso is in the northern extreme of the Chihuahuan Desert and lies on the frontier of three states, two countries, and three diverse water supplies. The Rio Grande Valley in El Paso forms a natural crossing between the Chihuahuan Mountains to the south and the Franklin Mountains to the north. The region, consisting of El Paso, Texas; Ciudad Juárez, Mexico; and Las Cruces, New Mexico, is home to more than 2 million people. The region has a unique quality possessing the largest bilingual and bicultural workforce in the Western Hemisphere.

The city's name may be traced to the Spanish El Paso Del Norte or the "Pass of the North." During the 16th century, conquistadors, such as Álgar Núñez Cabeza de Vaca, Francisco Vásquez de Coronado, and Don Antonio de Espejo, led an expedition through the area in the name of the Spanish crown and were met with resistance by natives. Most explorers traveled through in search of the fabulously rich Seven Cities of Cibola and chasing legends of lost gold. In 1998, the city marked the quadricentennial celebration of those who stayed, marking the 400th anniversary of Don Juan de Oñate's crossing of the Paso del Norte that formed the first permanent settlement in the area.

In April 1598, on the banks of the Rio Grande in the San Elizario area, about 500 expedition settlers marked the first Thanksgiving in North America, about 23 years before the better-known feasts in Massachusetts in 1621. When the feasting ended, Oñate took possession of all lands watered by the Rio Grande. Oñate's El Paso would become a major metropolis in Texas four centuries later.

The Sun City nickname is well earned, as El Paso enjoys an average daily temperature of 70 degrees and more than 300 days of sunshine each year. The city plays host to the annual Sun Bowl college football game – second only to the Rose Bowl as the oldest continuous bowl game – as well as a college basketball tournament and a parade also associated with the Sun Bowl. Low humidity and an average annual rainfall of 9 inches make the Sun City a yearlong destination. El Paso

is one of only two counties out of the 254 in Texas located in the Mountain Time zone and is representative of several topographies.

The city's average elevation is 3,762 feet above sea level, climbing as high as 7,200 feet. The nearly 250 square miles of incorporated land is part of the junction between Mexico, New Mexico, and Texas and also includes farmland along the Rio Grande. The river has been tamed from its historical might.

Called the Río Bravo in Mexico, the Rio Grande originates with snowpack and snowmelt from southern Colorado and northern New Mexico. The river is also the natural boundary between the United States and Mexico, from El Paso to the Gulf of Mexico. Two major treaties resolved disputes between countries and states over Rio Grande water rights.

The Convention between the U.S. and Mexico on the Equitable Distribution of Waters of the Rio Grande was signed on May 21, 1906, by President Theodore Roosevelt. This agreement is administered by the International Boundary and Water Commission. The Rio Grande Compact is an interstate compact signed in 1938 between Colorado, New Mexico, and Texas and approved by the U.S. Congress to equitably apportion the waters of the Rio Grande Basin.

To meet the needs of the water allocations, the U.S. Department of Interior's Reclamation Service (now Bureau of Reclamation) built the Rio Grande Project. The project captures spring runoff and summer rains to be held in one of the world's largest manmade lakes (Elephant Butte) and a major infrastructure system for water delivery. The project was authorized in 1905, and Elephant Butte opened in 1916. The project's final features were added in the early 1950s. The system is comprised of the 300-foot tall Elephant Butte Dam and its smaller companion Caballo Dam, six diversion dams, 141 miles of canals, 462 miles of laterals, and 457 miles of drains. A small hydroelectric plant was part of the original project but was sold to a private electric company.

The Rio Grande flows through narrow gorges requiring diversion and canal systems for three valleys: the Rincón, Mesilla, and El Paso. The Rio Grande Project furnishes an irrigation water supply for about 178,000 acres of land in Doña Ana, Sierra, and Socorro counties in south-central New Mexico and the City and County of El Paso.

Of the project lands, 60% are in New Mexico, and the remaining 40% are in Texas. Supplemental drainage provides water for 18,000 acres in the Hudspeth County's Conservation and Reclamation District.

POPULATION AND ECONOMY

According to the U.S. Census for 2020, El Paso was the sixth-largest city in Texas and the 22nd-largest city in the United States, with a population of about 680,000. El Paso County is the ninth largest county in Texas with an estimated population of 865,000. El Paso's sister city of Ciudad Juárez, Mexico, in 2021 had an estimated population of 1.5 million. With a population of about 220,000 in the neighboring Doña Ana County, New Mexico, the combined Borderplex region constitutes one of the largest international border communities in the world. El Paso consistently ranks among the most affordable major cities by multiple sources.

*Source: City of El Paso, Economic and
International Development, January 2023*

The cost of living has been impacted by inflation in recent years. Housing prices peaked in 2022 with a median home price of \$240,000. Fairly tight supplies in the 2023 housing market are also expected to continue. The Federal Reserve Bank of Dallas reports that El Paso's average hourly wage growth has seen gains of 8.5%. However, food prices rose 10.9% in September 2022, while energy prices rose 17.6%. El Paso experienced post-pandemic economic growth throughout 2022. The U.S. Bureau of Labor Statistics reports that labor market conditions continued to improve substantially over the course of the year with the June 2022 unemployment rate at 4.2%, down from more than 5% in November 2021 (and down from 8% in November 2020).

The Bureau of Labor Statistics reports that total El Paso County employment is 329,200, with a breakout of jobs in these top sectors:

- Government – 70,500
- Trade, Transportation, and Utilities – 69,900
- Education and Health Services – 48,300
- Leisure and Hospitality – 41,000
- Professional and Business Services – 36,900
- Manufacturing – 17,600

The biggest gains in 2022 were in leisure and hospitality (7%), while the biggest losses were in professional and business services (-4.2%).

Fort Bliss

The Fort Bliss military installation continues to be a major force in the El Paso economy and is the single largest employer in the region. According to the Defense Department, Fort Bliss, in 2021, directly employed more than 40,000 military personnel and about 10,000 civilian personnel. Fort Bliss serves and supports all branches of the military. It is a major mounted maneuver training post and home to the 1st Armored Division. Fort Bliss is an Army Forces Command (FORSCOM) installation with three brigade combat teams, a combat support hospital, military police, training, network operations, reserve training, and mobilization. EPWater provides wholesale water and wastewater services to Fort Bliss. The utility provides Fort Bliss with 25% of its water needs and 100% of its wastewater needs.

Trade/Logistics

With its 11 ports of entry, and access to major U.S. markets by truck (I-10), rail (Union Pacific's "sunset route"), and the El Paso International Airport, El Paso has become a growing destination for major logistics operations. According to the Paso del Norte Economic Indicator Review, each of the top ten U.S.-Mexico ports of entry registered an increase in total trade for the January 2022 period on a year-over-year basis. Between January 2019 and January 2022, El Paso's ports saw a combined 13% increase in trade gains. Experts attribute this to a boost in exports from Mexico as China's labor costs have outpaced those of Mexico (trend since 2014).

Higher Education

The El Paso region is home to nine post-secondary institutions, including two four-year and graduate post-secondary institutions: The University of Texas at El Paso (UTEP) and Texas Tech University Health Sciences Center.

UTEP is the second oldest member of the University of Texas System. It was founded in 1913 and became part of the UT system in 1919. The UTEP campus architecture is derived from the temples in the Himalayan Kingdom of Bhutan. According to the UTEP website, enrollment is nearly 24,000, and the university offers a combination of 169 bachelor's, master's, and doctoral programs. UTEP has been recognized as a top minority degree producer by *Diverse: Issues in Higher Education* magazine. About 84% of UTEP's students are Hispanic, with many from El Paso.

The Texas Tech University Health Sciences Center has been a catalyst for achieving first-rate medical, nursing, and dental care in the region. The Center is comprised of four schools: the Paul L. Foster School of Medicine, The Gayle Greve Hunt School of Nursing, the Graduate School of Biomedical Sciences, and the Woody L. Hunt School of Dental Medicine which opened in 2021.

UTILITY PROFILE

HISTORY OF EL PASO WATER

Although the Utility has been in existence in some form for as long as the City of El Paso has, it was not until 1952, when the **Public Service Board (PSB)** was created, that **El Paso Water (EPWater)** took its present form. With the leadership and foresight of Mayor Fred Hervey to address El Paso's water demands and make water issues as apolitical as possible, the PSB was created through a city ordinance. El Paso City Ordinance No. 752, adopted May 22, 1952, established a five-member board of trustees known as the PSB. It was given complete management and control of the city's water system. The ordinance was later amended to increase the size of the board to seven members. The board of trustees consists of the mayor of the City of El Paso and six residents of El Paso County, Texas. Except for the mayor, all other trustees are appointed by the City Council and serve staggered four-year terms. The PSB typically meets on the second Wednesday of each month.

For financial reporting purposes, EPWater is considered a component unit of the City of El Paso; with oversight of the PSB, EPWater operates and manages the Utility on behalf of the City. The PSB adopts an annual combined operating, capital, and debt service budget, with associated rates and fees for services, and issues updates to its Rules and Regulations, which carry the force of law. The Utility does not issue *ad valorem* property taxes. Instead, the PSB recovers the cost of providing water, wastewater, and stormwater services primarily through user charges. The Utility endeavors to provide the highest quality water, wastewater, and stormwater services to its customers at the most reasonable cost possible.

In 2008, the City Council established a Stormwater Utility to be operated and maintained by El Paso Water and supported by monthly user fees. The creation of the stormwater utility was a result of 2006 storms that caused major flooding and more than \$200 million in damages to businesses and homes.

ASSETS

The combined major system assets for the water, wastewater, reclaimed water, and stormwater utilities are valued at \$2.2 billion. The following table summarizes the major infrastructure in the system.

Water and Wastewater	Stormwater
<ul style="list-style-type: none"> • 4 water treatment plants • 4 wastewater treatment plants • 153 wells • 2,767 miles of water lines • 2,368 miles of wastewater lines • 11,621 fire hydrants • 76 reservoirs • 75 lift stations • 60 pump stations • 53 booster stations 	<ul style="list-style-type: none"> • 466 ponds • 41 dams/basins • 74 miles of channels • 9 miles of agricultural drains • 7,649 drainage inlets • 22 stormwater pump stations • 344 miles of storm drain conduits

Note: assets as of December 31, 2022

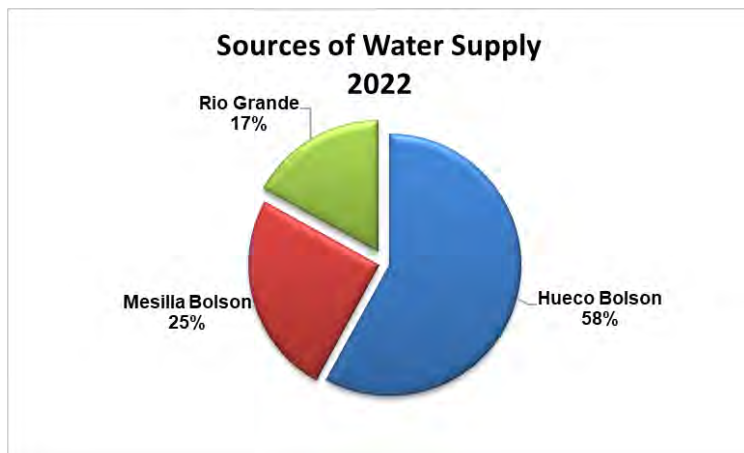

In June 2021, the PSB acquired the Esperanza Water System in Hudspeth County, which serves about 300 homes and has estimated assets of \$1.7 million. As a leader of the Texas Water Development Board's Far West Texas regional planning group, EPWater sees its role as a protector of the region's current and future water resources. The decision to acquire the Esperanza Water System was a decision to keep regional water in regional hands.

SOURCES OF WATER SUPPLY

El Paso uses groundwater and surface water for its potable supply. In 2022, the city produced about 121,727 acre-feet of potable water for customers.

- Groundwater sources — underground aquifers tapped by wells — including the Hueco Bolson, which supplied 58% of total demand, and the Mesilla Bolson, with 25%. *Bolsón* is Spanish for "pocket."
- Rio Grande surface water accounted for 17% of the supply.
- Reclaimed water helps supply non-potable demands, and more than 1.8 billion gallons of reclaimed water was used for turf irrigation and industrial uses.
- The groundwater capacity is approximately 170 million gallons per day (MGD), including desalinated brackish groundwater. The amount of surface water available each year varies, depending on drought conditions, and in the event of limited surface water, the city will pump more groundwater from its wells.

Historically, EPWater has relied heavily on groundwater because it could be pumped virtually at drinking water quality standards, whereas river water requires treatment to remove sediment, naturally occurring organic matter, and other compounds. However, because groundwater supplies are invariably finite, the PSB has engaged in a

multipronged solution to address and ensure El Paso's future water supply. The PSB owns land in the county and leases additional acres for water rights. In addition, EPWater has third-party agreements with the El Paso County Water Improvement District #1 and the U.S. Bureau of Reclamation, which allows for the purchase of additional surface water to supply the Jonathan W. Rogers Water Treatment Plant. In addition, the Kay

Bailey Hutchison Desalination Plant is designed to treat brackish groundwater. The desalination plant built-in 2007 in far east El Paso can produce up to 27.5 MGD of safe drinking water. A multi-phase expansion plan has begun, with the first phase designed to increase production capacity to 31 MGD, and a second phase is planned for the future to potentially increase capacity up to 42 MGD.

The Rio Grande is a major source of water for the city of El Paso. The amount of water received each year from the Rio Grande is dependent on the volume of water stored in the Elephant Butte Reservoir in southern New Mexico. Elephant Butte receives its water primarily from the melting of snowpack in the mountains of southern Colorado and northern New Mexico. Wind, above-average temperatures, and below-average precipitation may reduce runoff, which can adversely impact the amount of water stored in the reservoir and what is available to EPWater. In 2022, EPWater used 20,296 acre-feet (AF) of river water for its supply. This amount represents only 34% of the full river allocation of 60,000 AF. In comparison, only 10,000 AF of river water was used in 2013, a year of severe river drought. In 2023, it is expected that the severe drought will continue with a minimum allocation of river water and a shortened season of only a couple of summer months.

Historically groundwater has been El Paso's primary source of supply for many decades, and heavy pumping led to declining groundwater levels in the Hueco Bolson. Through a combination of water supply diversification and conservation, the rate of decline has been reduced.

CONNECTIONS AND CONSUMPTION

At the end of 2022, EPWater had 220,824 retail connections, and total retail metered consumption was approximately 29.4 billion gallons. Of this total:

- Residential customers (single-family homes) represented 195,965 connections and consumed approximately 16.0 billion gallons.
- Multifamily homes (apartment complexes, duplex/triplex) represented 5,342 connections and consumed approximately 3.0 billion gallons.
- Industrial customers represented 83 connections and consumed 445.4 million gallons.
- Commercial customers represented over 15,908 connections and consumed approximately 5.6 billion gallons.

- Institutional customers (public/government/other) represented 3,221 connections and consumed 4.4 billion gallons.

In addition to retail sales, EPWater supplied wholesale customers with 3.9 billion gallons during 2022.

Water Use

El Paso is in the Chihuahuan Desert, and water use fluctuates seasonally. Peak demands occur in the heat of summer because of increased landscape watering and the use of evaporative air conditioning. Water demands in the winter months with cooler temperatures account for 50% of peak summer demands.

Note: 2020 Consumption and GPCD increased because of 7% increase in residential consumption during the COVID19 pandemic

WATER CONSERVATION

With its sunny days and mild temperatures, El Paso is a desert oasis. However, because rainfall averages only 9 inches per year, water conservation is essential to the city's economy, environment, and quality of life.

EPWater began an aggressive water conservation program in 1991 and has reduced water consumption from more than 200 gallons per customer per day (GPCD) to under 129 GPCD in 2022; however, during the pandemic, consumption spiked to 134 GPCD in 2020, consistent with Texas, national and international trends. El Paso

Water's 2019 Water Conservation Plan has set a target of 125 GPCD by 2030 and a target of 115 GPCD by 2040.

Water Conservation Ordinance

EPWater's Water Conservation Ordinance was adopted by City Council in 1991. The ordinance encourages sound conservation practices and specifies the following:

- Landscape water days (odd/even) and watering restriction times (April – September)
- Limits for at-home car washing
- Requirements to repair leaks within five days
- Requirements for the installation of efficient plumbing fixtures

In 1995, the city established landscape requirements for commercial properties, including water conservation restrictions and beautification guidelines. Additional updates in 2001 prohibited sprinkler-irrigated turf areas in parkways. Landscape requirements for commercial properties may be found under Title 18 – Building and Construction, Chapter 18.46 Landscape, and Chapter 18.47 Irrigation Systems.

Incentives

Over the years, EPWater has provided a variety of conservation incentive programs that have positively impacted residential water consumption. Most of those residential programs have ended, given the gains achieved and new efficiency requirements for new homes. In recent years, EPWater has shifted its focus to commercial and institutional sectors, providing water audits to assist customers with water-use reductions and incentivizing water efficiency improvements through its WaterWise rebate program.

Education

An important part of the conservation program is education and outreach to build a conservation culture in El Paso. The Carlos M. Ramirez TechH₂O Water Resources Learning Center opened its doors in 2009 and offers visitors bilingual information and interactive exhibits to increase awareness of total water management in the Chihuahuan Desert.

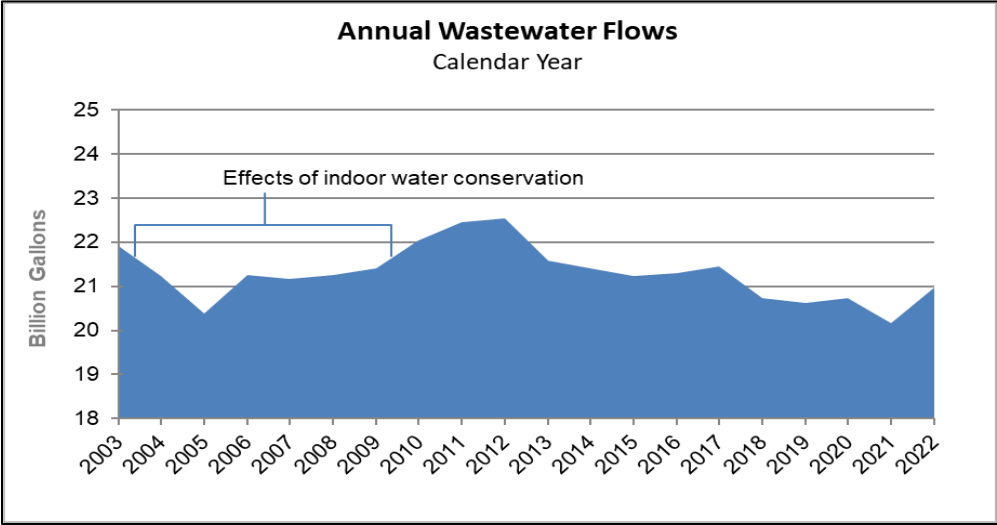

The TechH₂O Learning Center is a hub for educators, students, and the public, with programs that include field trips, in-school classroom presentations, teacher workshops, and family-oriented signature events. The Utility's water conservation mascot, Willie the Water Drop, is a popular attraction at schools, and community events and is featured in videos available on the TechH₂O website.

Rate structure and conservation

In 1991, EPWater implemented an inclining rate structure where the unit price increases as water consumption increases. The Utility uses pricing as both a demand management tool and a way to generate additional revenue.

Municipal water utilities use rate structures and pricing signals as a water management tool to decrease non-discretionary water usage. As the price of water rises, increases in revenue will more than offset a resulting decrease in consumption. Consumers are relatively unresponsive to small changes in the price of water. To send the right price signal to consumers, some water utilities have adopted larger rate increases to get the desired response of decreased consumption.

The price elasticity of water also depends on other factors, such as precipitation and temperature, household income (the higher the household income, the higher the level of water consumption), and the implementation of conservation outreach programs.

RECLAIMED WATER

Reclaimed water plays a significant role in conserving El Paso's potable water supply. Reclaimed water is wastewater that is treated to be suitable for safe use in many beneficial applications, such as industrial and irrigation. Although the Haskell R. Street Wastewater Treatment Plant (WWTP) has been providing its effluent to Ascarate Golf Course for irrigation since 1963, EPWater began making aggressive efforts to expand its reclaimed water treatment and distribution system in 1992. EPWater provides advanced secondary treatment, which removes 98%

of organic pollution and disinfects 99.99% of reclaimed water, and tertiary treatment, which removes 99.9% of organic pollution and disinfects 99.99% of reclaimed water to users throughout the city, from all four of its wastewater treatment plants.

With the expansion of the Haskell R. Street WWTP reclaimed system, EPWater is able to provide service to seven parks, three schools, Evergreen Cemetery, the El Paso Zoo, the historic Concordia Cemetery complex, and various street medians. The first phase was completed in 2003, and the second phase was completed in 2006. A third phase was built in 2006 to provide two automated dispensing stations and four-post hydrants for street sweeping and construction use. In 2012, the North Central Reclaimed Water System-Phase 1 was constructed, and it provides reclaimed water service to the Texas Tech Medical School.

The John T. Hickerson Water Reclamation Facility provides reclaimed water service to the Northwest area. Distribution and transmission lines deliver reclaimed water service to customers, including the Coronado Country Club golf course, three townhome associations, three apartment complexes, five City parks, a medical office building, three commercial landscapes, a shopping center, the Don Haskins Recreational Center/Park, Canutillo High School, and the Westside Sports Complex.

The Roberto R. Bustamante WWTP provides reclaimed water to the Mount Carmel Cemetery and the Riverside International Industrial Center, just east of Loop 375, and for other uses in construction.

The Fred Hervey Water Reclamation Plant produces tertiary quality reclaimed water for El Paso Electric Co., Painted Dunes Desert Golf Course, Bowen Ranch, and for construction uses. The remaining reclaimed water gets recharged into the Hueco Bolson for aquifer replenishment.

These projects are informally called the "purple pipe" projects because of a regulatory requirement to color-coordinate utility lines based on what they transfer. EPWater distributes and bills nearly 1.8 billion gallons of reclaimed water per year. There are three golf courses, 18 parks, and 13 schools connected to the system as well as a Zoo, six residential customers, six cemeteries, 18 commercial landscapes, one industrial company, a hospital, and several roadway medians. The cost-benefit has been particularly favorable due to millions of dollars in federal government grants for these projects and the costs are comparable to other viable new water supply sources.

WATER AND WASTEWATER SYSTEMS

EPWater owns and operates facilities throughout El Paso, including water and wastewater treatment plants, water reclamation plants, reservoirs, booster pump stations, wells, lift stations, and thousands of miles of distribution and collection lines outlined below. The water and wastewater map in the appendix geographically shows the area served by each facility.

WATER SYSTEM FACILITIES

Robertson/Umberhauer Water Treatment Plants

The Robertson Plant began operations in 1943, with a 20 MGD capacity; the Umberhauer Plant was added in 1967, also with a 20 MGD capacity. Combined, these two plants are often referred to as the Canal Street WTP; they use conventional surface water treatment to purify Rio Grande surface water (typically from March to September, when water is released from Elephant Butte Dam to serve downstream users). The plants may be utilized during the non-irrigation season to blend and treat water pumped from wells. The Canal Street WTP provides water to Central and West El Paso. A major infrastructure renovation was completed in 2004, which included the installation of an ultraviolet light disinfection system for a portion of the water leaving the plant. Major electrical upgrades were also completed in 2006. In 2020-2021, improvements were made to the disinfectant handling and storage system, and raw river water intake screens were replaced. In FY 2023-2024, the plant is scheduled for rehabilitation of the pump station, clearwell, clarifier covers, and filter gallery improvements to backwash supply valves and actuators. The combined facility is a regular recipient of the American Water Works Association's Partnership for Safe Water Director's Award, which honors dedication to providing high-quality water to customers and recognizes continuous optimization of the plant's operation and performance.

Jonathan W. Rogers Water Treatment Plant

This plant, operational since 1993, was expanded to a total capacity of 60 MGD in 2002. EPWater received a \$14.9 million Environmental Protection Agency (EPA) grant through the Border Environmental Cooperation Commission (BECC) and NADBank for this project, which expanded the plant's surface water treatment capacity by 50%. The grant represented approximately 40% of the cost of the total project. In 2020, a new streamlined ozone disinfection system was completed that also increased energy efficiency. In FY 2023-2024 the plant is scheduled for chemical tanks and security fence replacements, settling pond gate improvements, and process pumps and screen replacements. The plant is a regular recipient of AWWA's Partnership for

Safe Water Director's Award, which honors dedication to providing high-quality water to customers and recognizes continuous optimization of the plant's operation and performance.

Upper Valley Water Treatment Plant and other Arsenic Facilities

In 2005, EPWater began operating four treatment plants specifically designed to achieve compliance with the EPA's new maximum contaminant level (MCL) for arsenic, which became effective on January 23, 2006. The four plants have a combined treatment capacity of 41 MGD, which results in a design capacity of 96 MGD blended water meeting the MCL. The largest of the four plants is the 30 MGD Upper Valley Water Treatment Plant, which uses conventional flocculation, sedimentation, and filtration to remove arsenic. The remaining three plants have a combined capacity of 11 MGD and use granular iron media to adsorb arsenic.

Kay Bailey Hutchison Desalination Plant

The Kay Bailey Hutchison Desalination Plant began operations in 2007. A joint project of EPWater and Fort Bliss, the plant facility is capable of producing 27.5 MGD of fresh water daily. This state-of-the-art facility applies an innovative reverse osmosis technology to convert the brackish groundwater to high-quality drinking water. This desalination process not only removes salts but is also the most comprehensive water treatment technology available, removing other potential pollutants from the water. The water pumped to the desalination plant protects El Paso's and Fort Bliss' fresh groundwater supplies from brackish water intrusion by capturing the flow of brackish water toward freshwater wells. In FY 2023-2024, the plant is scheduled to start construction of an additional sixth skid which is needed for the future plant expansion to increase capacity to 33 MGD. In addition to RO membrane booster pump VFD upgrades and pump replacements. In 2020 and 2021, the plant received the American Membrane Technology Associations Outstanding Large Plant Award.

STORAGE AND DISTRIBUTION SYSTEM

In addition to the two surface water treatment plants, EPWater's distribution system includes approximately 76 reservoirs, 60 pump stations, more than 11,500 fire hydrants, and more than 2,800 miles of water lines in various sizes. EPWater has a system of more than 150 wells. EPWater must operate and maintain the entire system 24 hours a day, seven days a week, and 365 days a year. Even though infrastructure failures do occur, EPWater ranks among the most reliable in the world. The median number of main breaks, as reported by the American Water Works Association (AWWA), is one per every 4.2 miles of water line; EPWater averages one per every 15.7 miles of water lines — that's more than three times as good.

WATER QUALITY

Currently, both surface water and groundwater treated by EPWater are monitored, and the quality is reported to required public regulatory agencies. Both the Environmental Protection Agency (EPA) and the Texas Commission on Environmental Quality (TCEQ) have hundreds of standards for quality and reporting, which must be met every day. The Utility also works closely with other government agencies such as the United States Geological Survey (USGS), the International Boundary and Water Commission (IBWC), the Rio Grande Compact Commission, the Department of the Interior's Bureau of Reclamation, and Border Environmental Cooperation Commission (BECC) to name a few. EPWater has a long history of receiving awards for

compliance in meeting or going beyond regulatory standards. EPWater provides an annual drinking water report update to customers with a full report located on the website (www.epwater.org) in compliance with the EPA's Consumer Confidence Rule. The report describes the Utility's water content with respect to Safe Drinking Water Act standards. It is available in both English and Spanish, and a bill insert with a link is provided to all customers annually. The Utility tests regularly for many parameters, such as inorganic compounds, metals, microbiological organisms, synthetic organic chemicals, and volatile organic compounds. The results are reported to the TCEQ and EPA. Since the Utility meets or goes beyond compliance with all water quality requirements and transmits safe drinking water to its customers in a reliable manner, the TCEQ recognizes EPWater as a Superior Water System, the highest designation earned in Texas.

The Association of Metropolitan Water Agencies (AMWA) presents top utility management awards annually through a competitive selection process. The Sustainable Water Utility Management Award spotlights efforts of water utilities to implement long-term and innovative economic, environmental, and social endeavors. For 2020, EPWater was one of nine water utilities to be selected for this award. EPWater also received this award in 2014, but to be eligible for a second time, a utility must show new and different initiatives successfully implemented since the last award.

WASTEWATER SYSTEM FACILITIES

Haskell R. Street Wastewater Treatment Plant

The oldest wastewater facility in El Paso, the Haskell R. Street Wastewater Treatment Plant was built in 1923. It has since undergone several expansions and upgrades, including a \$22 million upgrade to increase treatment capacity to 27.7 MGD and improve treated wastewater quality and operational efficiencies at the plant, completed in 1999. This plant provides highly treated reclaimed water for the Central El Paso reclaimed water system. (See the reclaimed water section for more details). In FY 2023-2024, the plant is scheduled to rehabilitate chlorine scrubbers and screenings wash press and begin a multi-year program of improvements to the plant's backup power, grit removal, aeration blower, and diffuser system, and anoxic basin replacements. This plant has won awards for perfect compliance with regulatory permit requirements from the National Association of Clean Water Agencies (NACWA). The plant has also received the Texas State and EPA Region VI winner of the Operations and Maintenance Excellence Award, Large Advanced Plant Category.

John T. Hickerson Water Reclamation Facility

Serving the Westside of the Franklin Mountains into the Upper Valley, this plant began operations in 1987 and has since been expanded to 17.5 MGD of treatment capacity. Highly treated wastewater is either safely discharged into the Rio Grande or transmitted through the Northwest Reclaimed Water Distribution System. (See the reclaimed water section for more details.) In FY 2023-2024, improvements are being completed to place the original plant treatment train back into service and improvements to the aeration basin gates, blower engine overhaul, dissolved air filtration, odor control, headworks screens, and the plant's emergency backup power generator. The plant's ultraviolet light disinfection system was completely upgraded in 2022. The Hickerson plant has been nominated for numerous EPA Operations and Maintenance Excellence Awards and has also received the top award in the National Clean Water Act Recognition Awards for Operations and Maintenance Excellence in the Large Advanced Plant Category. The plant, for many years, has received the NACWA Platinum Award for perfect permit compliance. The plant and personnel have also been recognized for their commitment to safety and were awarded the Water Environment Federation's George W. Burke Award for Safety. The plant was also named Texas, Regional and National winner of the Clean Water Act O&M Awards Program in the Large Advanced Category.

Roberto R. Bustamante Wastewater Treatment Plant

The plant began operating in 1991 with a 39 MGD capacity that uses traditional technology for treatment. This plant, along with the neighboring Jonathan Rogers WTP, serves the fast growing east side of El Paso. Honored by NACWA for its perfect compliance with NACWA Gold Awards, the Silver Peak Performance Award, and Platinum Awards; the plant has also received national EPA Operations and Maintenance Excellence Awards and won the Water Environment Association of Texas Plant of the Year Award in 2005. Treated wastewater is discharged into either the Riverside Canal or the Riverside Intercepting Drain for use downstream. A new large-scale reclaimed water project (online since 2002) with a capacity of two million gallons per day also serves the immediate area. EPWater has completed the first of several improvements to the plant's aeration basins, which will lead to an enhanced treatment to serve continued growth in the area. In FY 2023-2024, the plant will continue major renovations to increase the plant's capacity to 51 MGD at an estimated cost of \$742 million over the next ten years.

Fred Hervey Water Reclamation Plant

This 12 MGD plant has won many awards and garnered worldwide attention. The Fred Hervey plant is essentially a combined water and wastewater treatment plant, which treats wastewater to drinking water quality standards. The plant's treated wastewater is sold to El Paso Electric Co. for cooling water, the nationally renowned Painted Dunes Desert Golf Course for irrigation, and various other customers in the Northeast part of the city. The remainder is treated to drinking water quality and replenishes the Hueco Bolson through a series of injection wells and several groundwater recharge infiltration basins. Tours are regularly provided to industrial, utility, and academic researchers as one of the model plants of the system. The plant became operational in 1985 and was significantly financed with EPA assistance. The plant is also a crucial part of

EPWater's plan to reduce dependence on groundwater and was featured on the internationally acclaimed PBS series "Water: The Drop of Life." In FY 2023-2024, the plant is scheduled for several rehabilitation projects, which include the completion of a new blower building, clarifier rehabilitation of Lime Reactors, headwork screens, filtration, ozone building structural improvements, secondary clarifiers, and emergency backup power. The plant has received numerous awards, including the 1994 AMSA Public Information and Education Award; second place in the 1994 national EPA Operations and Maintenance Excellence Award, No Discharge Category; and the 1998 American Water Works Association's Conservation and Reuse Award. In 1999, the Fred Hervey plant received special recognition from the El Paso del Norte Region Mission Possible-Survival Strategies in the category "Protection and Preservation of the Environment." The plant has received numerous NACWA Gold Awards and Platinum Awards for perfect permit compliance under the expanded NACWA Peak Performance Award program.

LIFT STATIONS AND COLLECTION SYSTEM

The Utility also operates and maintains 70 lift stations and more than 2,400 miles of collection lines to keep the wastewater system running reliably to meet customer demand. The Water Environment Association of Texas (WEAT) in 2007 awarded the lift stations section with the George W. Burke Jr. Award for its effective safety program. In 2007, WEAT awarded the wastewater collection maintenance section with the Medal of Honor for Heroism in recognition of the section's contribution during the flood of 2006.

SUPPORT FACILITIES

Fleet Maintenance Facility

The Fleet Maintenance Building was completed in 2016 and is home to two sections: Heavy Equipment Operations and Fleet Maintenance. The state-of-the-art facility includes LED lighting and sensors that adjust the lighting in unoccupied rooms, infrared sensors that can measure body temperature to adjust indoor climate settings, and holding tanks for storing used oil, and it also has training resources for equipment operators. The facility also houses an onsite fueling station and a drive-through car wash. Fleet Maintenance maintains and repairs 649 Utility-owned vehicles and heavy equipment, which include trailers, loaders, and backhoes.

Warehouse, Meter Shop, and Property Control Facility

The Warehouse building was also completed in 2016 and is located next to the Fleet Maintenance Facility. It allows larger Utility trucks better maneuverability and accessibility for material deliveries and pick-ups. The larger layout accommodates more supplies, such as pipes, for special projects within the Utility. The Warehouse also manages all the personal protective equipment issued to Utility workers. The Warehouse manages approximately \$3 million in inventory for EPWater.

The Meter Shop is housed within the Warehouse facility where Meter Shop staff is responsible for repairing, testing, and replacing water meters ranging in size from $\frac{3}{4}$ inches to 12 inches. The shop features a new automated meter test bench, allowing employees to more accurately test small and medium-sized meters of up to two inches. The shop also repairs, tests and installs all construction fire hydrant meters issued to construction locations. The staff at the Meter Shop repairs approximately 2,000 meters per year out of approximately 221,000 EPWater customer meters.

The facility also houses Property Control, with two employees responsible for maintaining a complete inventory record of all Utility non-capital assets valued at more than \$20 million. They are responsible for tagging, recording, auditing, and disposing of obsolete assets. The disposal of miscellaneous assets, vehicles, and equipment was made easier in 2016 when the section started using GovDeals® to auction items to the public. They also obtain and maintain all licenses and titles for vehicles and equipment owned by EPWater.

International Water Quality Laboratory

The modern and open design facility, which is 27,000 square feet, celebrated its 10th anniversary in 2016. It has many cutting-edge features, which include an ultra-clean air system, a reverse osmosis water purification system, and a dedicated data management system. The laboratory consistently meets state and federal requirements by testing hundreds of tap water samples monthly. More than 45,000 samples and 350,000 chemical and biological analyses are performed and reviewed yearly, establishing the lab as a national model for high-quality water standards.

New Field Operations and Customer Service Building

EPWater's new Field Operations and Customer Service Building is across from the Fleet Maintenance Facility and continues to meet its aim of providing the highest quality water services while also adapting to its growth. Designed with a square footage of 53,567 to house approximately 390 employees over a 20-year growth period at a cost of \$21 million. This state-of-the-art facility serves as Central Control/Dispatch for EPWater as well as an Emergency "War Room" in the event of a citywide emergency. This facility is equipped with computer kiosks, a map room, a library, charging stations, and a power emergency room. This building was completed in May 2022 and is home to the following sections: Planning and Development, Water Division, Water Production, Water Distribution, Operations Management, Reclaimed Water, Wastewater Division, Cashiering, Customer Service, and Instrumentation and Controls.

Hawkins Administration Building

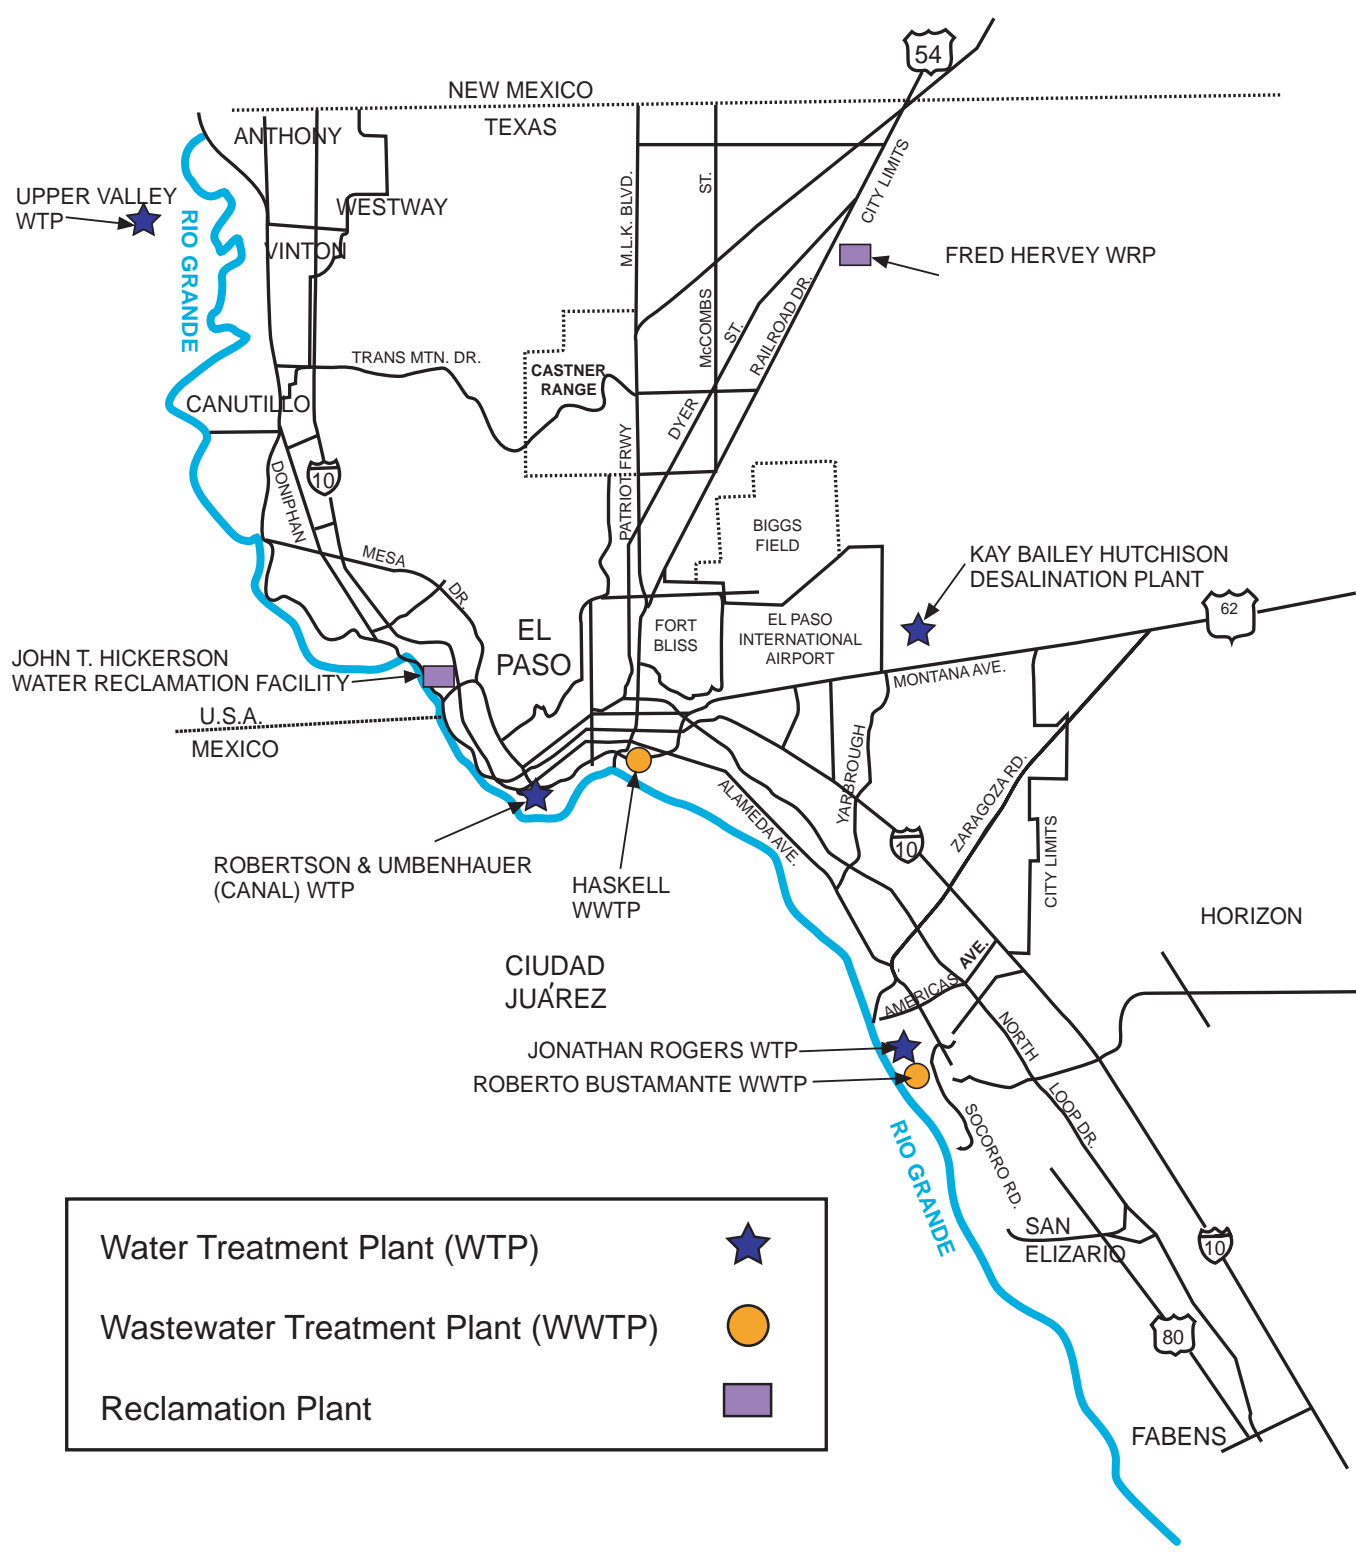

EPWater moved its administration building to its current location in 1991. The building known as “Hawkins” or “Main Office” holds the monthly PSB meeting in the boardroom and is home to several sections which provide Utility-wide support. Along with the President/CEO and two Vice Presidents, it also houses Finance, Accounting, Purchasing and Contract Administration, Treasury Management, Land

Management, Human Resources, Water Resource Management, Information Technology, Engineering Technical Services, Communications and Government Affairs, and Legal Services. Approximately 150 employees are housed in the building, providing the essential support needed to help maintain EPWater’s day-to-day operations. In FY 2023-2024, EPWater will complete the new parking facility and start the initial construction of a new state-of-the-art administrative building adjacent to the current building to be completed in early 2025.

El Paso

Water & Wastewater System

STRATEGIC PLANNING

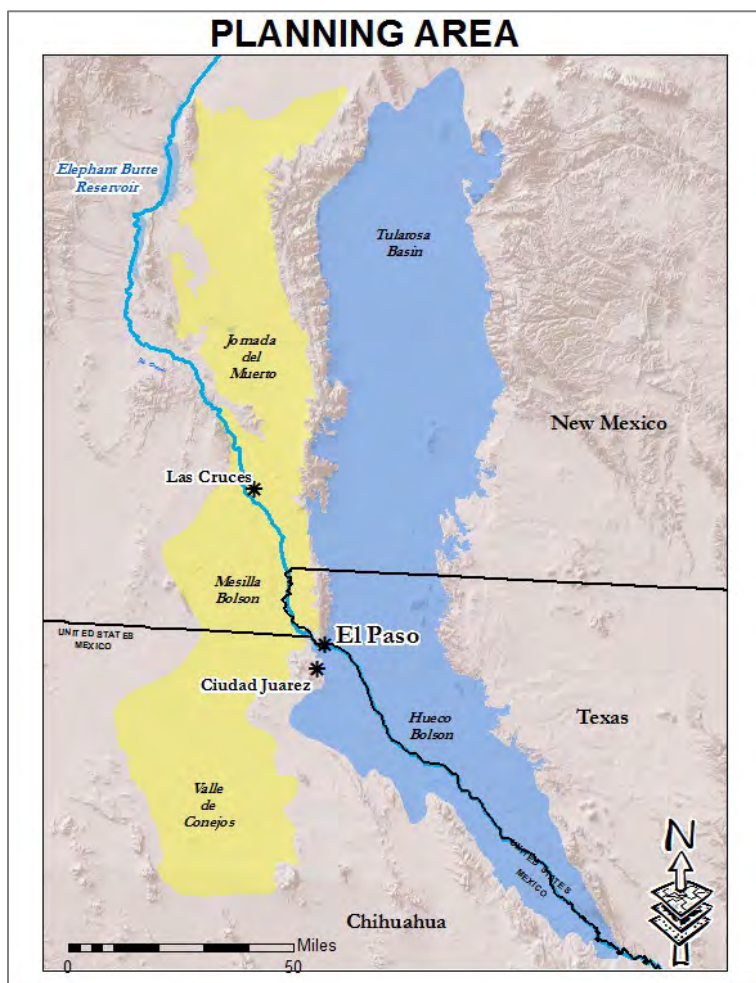

Long-term water and wastewater planning continues to be a critical component in managing the region's water resources. EPWater continues to take a leadership role in working with various entities throughout the region devoted to regional planning efforts.

EPWater and other stakeholders in the Far West Texas Regional Water Planning Group completed the 2021 Far West Texas Water Plan (Region E). The Region E State Water Plan is included as part of the State Water Plan that was submitted to the Texas Legislature. The Plan provides an

evaluation of current and future water demands for all water-use categories and water supplies available during drought-of-record conditions to meet those demands. Identifying where future water demands exceed the entity's ability to supply such needs, alternative strategies are considered to meet the potential water shortages.

This upcoming year, EPWater will begin working on the 2026 Far West Texas Regional Water Plan by conducting an analysis of projected population growth for the next 50 years. Population projections will be used to calculate water demands for the next 50 years. The State water plan is updated every five years and covers 50 years. Based on the future needs for water supply, EPWater will develop additional strategies as necessary. EPWater will continue to use its diversified water supply portfolio to meet future water supply-demand. EPWater's current supply portfolio includes the Rio Grande, groundwater from Mesilla and Hueco Bolsons, desalinized brackish groundwater, and water reuse, as well as an inclining rate structure that encourages water conservation. Future projects will include advanced purification, aquifer recharge, and groundwater imported from Dell City.

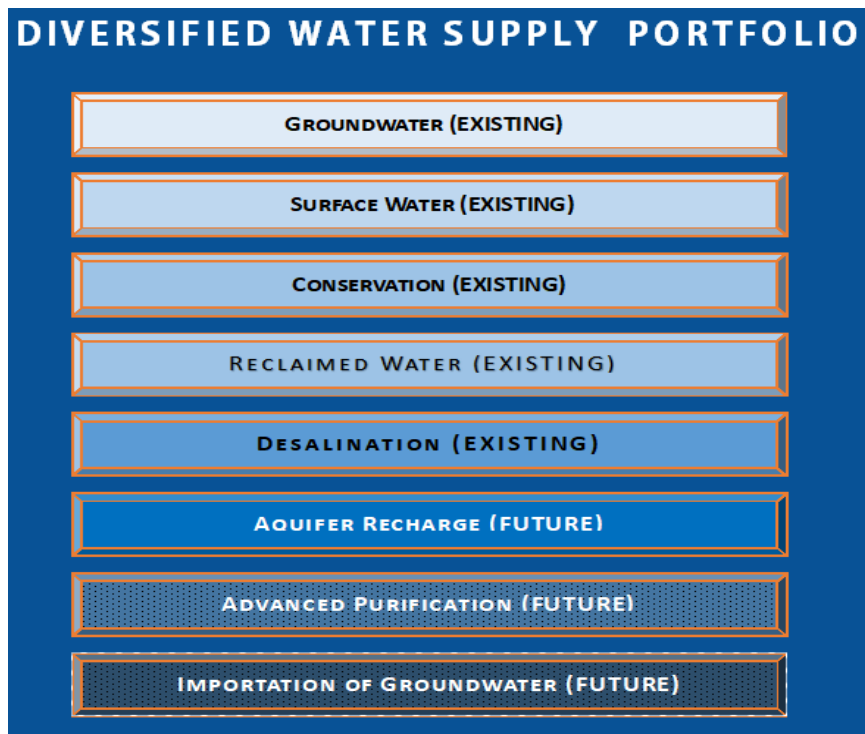

Regional leadership is and will continue to be an important consideration in the Utility's long-term planning strategies aimed at ensuring a sustainable supply of water. In 2022, EPWater's Water Resources section advanced the development of current and future water supply projects that will benefit EPWater's capacity to fully optimize its use of its groundwater resources. These projects are as follows; 1) Source Water Augmentation Parallel Pipeline has been completed and will provide an additional eight million gallons per day of brackish groundwater to be used in the future at the Kay Bailey Hutchison Desalination Plant once the expansion of the Desalination Plant is completed. 2) Enhanced Arroyo, a project that will

increase the amount of water recharged in the Hueco aquifer. Aquifer recharge is a proven method to improve the long-term sustainability of groundwater resources. 3) Pumping Systems Project. This 10-year project will provide well rehabilitation and pump replacement on the entire fleet of EPWater wells and will allow optimal production from wells and continued upgrade and replacement of well pumps. 4) Equipping of six Municipal Water Supply Wells, a project that will provide an additional six MGD (million gallons per day) of water supply across the city. 5) Drilling of ten Municipal Water Supply Wells near Newman Power Plant; this project will provide the wells needed to provide additional water supply for the Newman Plant and northeast El Paso (These wells will be equipped with infrastructure including pumps, piping, and electrical service in the following year.)

The current management approach and implementation of water supply projects identified in the Region E State Water Plan will ensure that El Paso's water supply will not be significantly impacted by even the worst-case drought conditions. Extensive planning and investment by EPWater will ensure that future water demands will be met through the year 2060 and beyond.

The continued implementation of the County Water and Wastewater Master Plan previously developed by the Utility and El Paso County continues to serve as a guide for working with communities located outside El Paso City limits that require assistance in receiving water. In addition, efforts to adhere to and consider smart growth principles within land-use Master Plans developed for properties owned by the PSB are well underway. Such planning efforts are to be completed before development occurs and will ensure that the necessary infrastructure and quality-of-life amenities are in place.

EPWater continues to explore and pursue different water supply options to maintain a diversified water supply portfolio to meet the water supply challenges of the future. Diversification includes groundwater, aquifer recharge, surface water, conservation and education, water reuse, desalination, and importation.

CHARTER

El Paso Water – Public Service Board exists to serve the water resource needs of the population of the El Paso geographical area. Its strategic and operational impetus is on affordably delivering quality services to all who demand them. These services include water, wastewater, reclaimed water, and stormwater.

As a growing Utility in a growing region, EPWater strives to anticipate, plan for, and react to the changing environment in which it operates. Through diligence in all functions, the Utility seeks to deliver ever-increasing value to its customers while promoting orderly growth in its service area. We encourage the involvement and participation of our stakeholders and the public through all levels of open and honest communication.

To be highly effective, we use all our resources to continuously create an enterprise for leadership, which is reflected in our technology, management style, critical business practices, and in our vision. Most importantly, it is reflected in our employees whose diligence and commitment are the cornerstones of the success of the Utility. To that end, we continually work to develop the capabilities and initiatives of our employees and our leadership. We believe it is primarily through their efforts that the Utility will continue to excel.

We recognize the criticality of the mission with which we are entrusted. Through a consistently high level of attention to the needs of the community, the Utility demonstrates an ongoing commitment to supporting the lifestyle demands of El Paso and the surrounding Southwest. In all actions, we seek to balance those demands with attention to conservation and restraint in our use of water resources. With our stakeholders as partners, we envision a bright future of water sustainability, technological innovation, and support of economic growth for the residents and commercial and industrial businesses that are vital to the City of El Paso.

STRATEGIC PLAN

In 2017, EPWater developed and published a 10-Year Strategic Plan that included the identification of twelve measurable and actionable Strategic Objectives. The plan helps EPWater identify and communicate the vision and pathways to continued success as an organization to both internal and external stakeholders.

EPWater cascaded or translated the organization-wide scorecard to the next level,

organized by functional units, that actively developed a balanced scorecard for their common functions within

the organization. Graphic representations or strategy maps for EPWater and the functional teams show how these objectives are interconnected and the four perspective levels that put the strategy in context.

FINANCIAL POLICIES

EPWater is accounted for as an Enterprise Fund, which is a proprietary fund. Enterprise Funds are used to account for operations that are financed and operate in a manner similar to private business enterprises, where the intent of the governing body is that the costs (including depreciation) of providing goods or services to the general public on a continuing basis be financed or recovered primarily through user charges. All activities necessary to provide such services are accounted for in this fund, including, but not limited to, administration, operations, maintenance, financing and related debt service, and billing and collection. EPWater uses no other funds to account for its activities; it consists of two enterprise funds, the Water and Wastewater Fund and the Stormwater Fund, which are accounted for separately.

FLOW OF FUNDS POLICY

City Ordinance No. 752 established certain "funds." These "funds" are mandatory asset segregation and not funds in the sense of governmental fiscal and accounting entities with self-balancing sets of accounts. These funds are described in the following paragraphs.

EPWater funds are designated in City Ordinance No. 752, which was adopted on May 22, 1952. This ordinance authorized the issuance of a series of Revenue Bonds entitled "City of El Paso, Texas, Water and Sewer Revenue Bonds Series 1952," and the City reserved the right and option in the 1952 resolution to issue, under certain conditions, additional bonds on parity as to lien and right with the Series 1952 Bonds.

Ordinance No. 752, as amended, requires that gross revenues of the System be applied in sequence to: (a) current expenses of maintenance and operations; (b) debt service and service requirements; (c) capital expenditures, or unexpected or extraordinary repairs or replacements, or for any other lawful purpose. The following funds have been established to account for the application of gross revenues: (i) Water and Sewer Fund; (ii) Water and Sewer Revenue Bond Funds, known as the Interest and Sinking Fund; (iii) Water and Sewer Revenue Bond Reserve Funds; and (iv) Water and Sewer Improvement Fund. All revenues of every nature received through operations of the System shall be paid into the Water and Sewer Fund. The Bonds Funds are required to contain an amount of money and investments equal to the principal and interest requirement during the fiscal year. The funds are described as follows:

Water and Sewer Fund

All gross revenues shall be deposited from day to day as collected in the Revenue Fund. Moneys on deposit in the Revenue Fund shall be first used to pay all Operation and Maintenance Expenses. The revenues of the System not actually required to pay Operation and Maintenance Expenses (the "Net Revenues") shall be transferred from the Revenue Fund to the other funds, in the order of priority, in the manner outlined in the Bond Ordinance.

Interest and Sinking Fund

The following shall be deposited in the Interest and Sinking Fund:

1. Such amounts, in equal monthly installments, commencing on the first day of the month next following the month of closing and on the first day of each month thereafter, as will be sufficient to pay the interest scheduled to come due on the bonds next interest payment date, less any amounts already on deposit therein for such purposes derived from the proceeds of the bonds or any other lawfully available source.
2. Such amounts, in equal monthly installments, commencing on the first day of the month next following the month of closing and on the first day of each month thereafter, as will be sufficient to pay the next maturing principal of the bonds, including any scheduled mandatory redemption of bonds.

Reserve Fund

So long as the funds on deposit in the Reserve Fund created for the benefit of all bonds are equal to the Reserve Fund Requirement, no deposits need to be made to the credit of the Reserve Fund. However, should the Reserve Fund at any time contain less than the Reserve Fund Requirement, then subject and subordinate to making the required deposits to the credit of the Interest and Sinking Fund, the Utility shall transfer from the Net Revenues in the Revenue Fund and deposit to the credit of the Reserve Fund, on the first day of each month, such amounts in equal monthly installments to accumulate within at least five years and one month a sum equal to the Reserve Fund Requirement. The money on deposit in the Reserve Fund may be used to pay the principal and interest on all bonds at any time there are not sufficient funds on deposit in the Interest and Sinking Fund for such purpose.

Improvement Fund

All money remaining in the Revenue Fund at the end of each month after all payments required to be made from the revenue fund have been made and all deficiencies accumulated from prior months have been paid shall continue to be paid to the Improvement Fund established in connection with the System, and shall be held in and paid out from such fund for the following purposes:

1. To pay the cost of any extraordinary repairs or replacements to or of the properties comprising the System, properly payable with such money under the laws of the State of Texas, necessitated by reason of some emergency.
2. To the extent permitted by law, for the making of extensions, improvements, and betterments of the System.

Contributions in Aid of Construction Fund

Any money received by the PSB shall represent contributions in aid of construction and shall be deposited in a separate account at the Depository Bank. Such contributions shall not be considered as part of the gross revenues of the System. Payments from such bank account shall be made only for the purposes for which the contributions were made, including any refunds that may become due to any contributor.

Land Sales Restricted Reserve Fund

Effective March 1, 2013, the PSB established a Land Sales Restricted Reserve Fund (LSRRF) to fund future water supply projects. All proceeds from land sales shall be deposited in the LSRRF to fund the following types of projects:

1. Purchase of water rights and/or land water rights
2. Expansion of the following plants:
 - A. Kay Baily Hutchison Desalination Plant
 - B. Jonathan Rogers Water Treatment Plant
 - C. Upper Valley Water Treatment Plant
3. Construction of additional desalination capacity
4. Indirect portable or direct potable reuse
5. Aquifer storage and recovery
6. Importation of water from areas outside El Paso County
7. Other water supply projects

CAPITAL IMPROVEMENTS BUDGET POLICY

For capital budgeting purposes, the Utility staff considers various criteria to prioritize capital projects, which include regulatory requirements; aging and condition; overloaded infrastructure; environmental impacts; reliability; drought, customer service; other agency driven projects (street and highway construction); growth and new development; new water supplies, financial impacts; emergency rehabilitation, and operational efficiency. The Utility defines a capital expenditure as an asset with an individual cost of \$25,000 or more and an estimated useful life over two years. New services, meters, newly installed pipe, and associated costs will continue to be charged to a capital job or asset class directly, regardless of cost.

Due to state procurement laws and the nature of capital improvement expenditures, it generally takes more than one fiscal year to completely spend one year's appropriations. By law, EPWater cannot award a project unless it is fully funded. However, many large projects have multiple-year and/or multiple phase construction periods. EPWater uses several benchmarks of efficiency to ensure capital budget integrity. These include timely completion clauses, aggressive efforts to minimize change orders, and tracking the progress of the overall capital improvement plan (CIP). On an annual basis, staff members from Technical Services, Operations, Information Services and Instrumentation, Land Administration, and Finance update the CIP. The final CIP document stretches from a mid-year update out to a ten-year planning horizon. It incorporates all known or likely-to-occur variables based on the growth and

maintenance of the current system, and addresses issues including new and/or probable regulatory requirements or political directives.

OPERATING BUDGET POLICY

The Utility's fiscal year runs from March 1 to the last day of February the following year. EPWater ties its 12-month budget year to the water "season." Historically speaking, without a year-round water supply of surface water to treat, the water treatment plants shut down for maintenance during the winter months. The surface water supply is not year-round because the upstream irrigation and diversion dams, including Elephant Butte and Caballo dams, are served by snowmelt from the Rocky Mountains. The water is released annually in conjunction with the farmers' irrigation season, which normally starts in mid-February and ends in early October. The Utility's surface water production season runs concurrently with the farmers' irrigation season. A normal fiscal year would include the following significant financial events:

- ❑ Mid-February – surface water production season begins except in times of drought
- ❑ March 1 – fiscal year begins
- ❑ June to September – strategic planning updates to the 10-year capital plan
- ❑ May to September – peak consumption months for EPWater customer demand
- ❑ September – six-month operating results distributed to each section manager so sections can begin planning for the upcoming fiscal year beginning next March
- ❑ October – surface water production ends (mid-month), and water treatment plants shut down except in times of drought
- ❑ October – sections submit operating budget requests
- ❑ October – internal budget conferences begin between the Sections and Management /Finance
- ❑ November – Management approves preliminary capital and operating budget requests
- ❑ November/December – budget workshops in which the PSB reviews the budget requests, and the public can comment
- ❑ January – PSB approves and adopts the final combined operating and capital budget for the fiscal year beginning next March 1

The Utility's FY 2023-2024 budget is a balanced budget, with the revenue and other financing sources equal to the expenditures and other uses.

BUDGET AMENDMENT POLICY

Capital budget transfers are submitted by the requesting manager to the Capital Improvement Project section with final approval by Finance and the Vice President (VP) of Business or designee. Operating transfers are initiated when the total budget for sections is exhausted and other sections are identified with excess remaining budget balances to cover the deficit. These transfers are done on a memorandum basis and are processed by the Finance Department with approval from the VP of Business and the President/CEO. Capital and Operating transfers are subject to approval by management but don't need

approval by the PSB. Emergency funding authorizations and amendments to the approved operating or capital budgets can only be done with approval by the PSB.

REVENUE POLICY

Ordinance No. 752 also requires that the PSB maintain rates sufficient to produce or yield revenues to produce in each fiscal year an amount adequate to pay all expenses incurred for the operations and maintenance of the System as such expenses shall accrue during the year and to produce an additional amount equal to 150% of the aggregate amount required to be paid in such year for principal and interest and redemption premiums on bonds payable from the Bond Funds. Another financial target used in preparing the five-year financial plan is maintaining a 90 to 120-day operating reserve fund balance.

Ordinance No. 752 also provides that the PSB will permit no free water or services to be supplied to the City or any other user. However, the ordinance requires that 10% of the total amounts received by the PSB from the sale of water be paid to the City Treasurer. The money received by the City Treasurer may be expended by the City under the direction of the City Council for any purpose for which revenues of the System may be legally used under the state laws of the State of Texas.

EPWater is a component unit of the City of El Paso and operates as an autonomous enterprise fund. Because the Utility operates in a proprietary manner, the major revenue sources are user charges for water and wastewater services. The Utility's revenue requirements are based on the cost of service. This includes operating costs, expenditures for capital improvements, and repayment of debt. The description and figures of the revenue sources are covered in the financial overview section of this budget.

INVESTMENT POLICY

The Utility also has an Investment Policy, which establishes the guidelines for: 1) who can invest PSB funds; 2) how PSB funds will be invested; and 3) when and how a periodic review of investments will be made. In addition to this policy, bond funds shall be managed by their governing ordinance and all applicable State and Federal Laws. The investment policy must comply with the Texas Public Funds Investment Act of 1995 and any such amendments since then. The primary objectives of the investment policy are 1) preservation of capital; 2) safety of PSB funds; 3) maintenance of sufficient liquidity; 4) maximization of return within acceptable risk constraints; and 5) diversification of investments. The investment policy requires an annual review and adoption of its investment policy and strategies and a quarterly comprehensive report to the PSB.

DEBT SERVICE POLICY

Planned rate increases consistently are programmed in the Financial Plan and are mainly driven by the capital improvement program and debt service coverage required both by the revenue bond covenants

and by the PSB's benchmarks for financial management. While the revenue bond covenants require debt service coverage of 1.5 times (meaning 150% of the current year's debt service requirements must be available that fiscal year), the PSB's financial benchmark is to maintain as close to a 2.0 times coverage as feasibly possible. The Utility does not have a legal debt limit.

FINANCIAL PLAN

BUDGET TRENDS IN FY 2022 - 2023

EPWater continues to evolve in addressing and meeting the needs of our customers in the 21st century. It is well-positioned to meet the challenges to serve a large metropolitan region in the Southwest. The Utility is focused on meeting the supply and demand of its current and future customers while minimizing costs and maximizing service.

The Utility has made a conscious and ongoing effort to reduce unaccounted for water and more accurate billing through a comprehensive program focusing on leak detection, reservoir rehabilitation, and increased meter replacement. Unaccounted for water has increased from 14% in 1996 to 16% in 2022.

The Utility issued the following bonds during FY 2022-2023:

- In April 2022, EPWater issued \$305.9 million of bonds, Series 2022, to take long \$80.0 million of Commercial Paper Notes and to finance \$273 million of capital projects.
- In September 2022, EPWater issued \$267.6 million of bonds, Series 2022A, to take long \$80.0 million of Commercial Paper Notes and to finance \$193 million of capital projects.

FY 2023 – 2024: MEETING FUTURE DEMANDS

The FY 2023-2024 operating and capital budget was presented to the PSB for review, input, and guidance during a public budget workshop and a regularly scheduled PSB meeting. The budget is consistent with the PSB's Strategic Plan. The budget workshop, public hearing, and budget adoption meetings were open to the public and were held as follows:

Budget Schedule	
<u>Date</u>	<u>Agenda</u>
November 29, 2022	Stormwater Utility Operating and Capital Budget and Water, Wastewater, and Reclaimed Water Operating and Capital Budget
January 11, 2023	Public Hearing and Adoption of Budget, Rates and Rules and Regulations for Water, Wastewater, Reclaimed Water, and Stormwater

ASSUMPTIONS

The FY 2023-2024 budget is based on certain assumptions and specific operating and capital budget costs. Financial projections for future years require additional assumptions related to revenue growth, expenditures, and necessary rate adjustments. Basic assumptions for this year's five-year financial plan include the following:

Basic Assumptions	
Customer growth rate	1.5%
Water billed	35.0 billion gallons
Water billed growth rate	1.5%
Wastewater treated	22.0 billion gallons
Wastewater treated growth rate	1.5%
Miscellaneous revenues growth rate	2.0%
Fire Protection growth rate	1.0%
Operations and Maintenance growth rate	1.0%
Contingencies	2.5% of operating budget
Interest earnings rate	4.5% of average fund balance
Payment to City (water only)	10.0% of water revenues
Payment to the City for Franchise Fee	Annual amount of \$6.55 million
Future debt financial costs	5.0%

BASIS OF BUDGETING

The budget and the Annual Comprehensive Financial Report are prepared using the accrual basis of accounting. Revenue is recognized as it is earned, and expenses are recognized as goods or services are delivered. The PSB has elected to apply all applicable Governmental Accounting Standards Board (GASB) pronouncements as well as Financial Accounting Standards Board pronouncements and Accounting Principles Board Opinions unless those pronouncements conflict with or contradict GASB pronouncements. The operating budget is prepared at the object level. The object of expenditure is the good or service for which the expenditure was made. For further detail, sub-object listings are provided and reported by the Utility as "account numbers." For a complete listing of the Utility's operating budget, refer to the section of this budget book entitled "Operating Budget Detail."

The Utility's funds are not appropriated; rather the budget is an approved plan that can facilitate budgetary control and operational evaluations. The Utility defines fund equity as net position, which equals assets minus liabilities

and deferred inflows of resources. Net position is divided into four categories; net invested in capital assets, restricted for construction and improvements, restricted for debt service, and unrestricted.

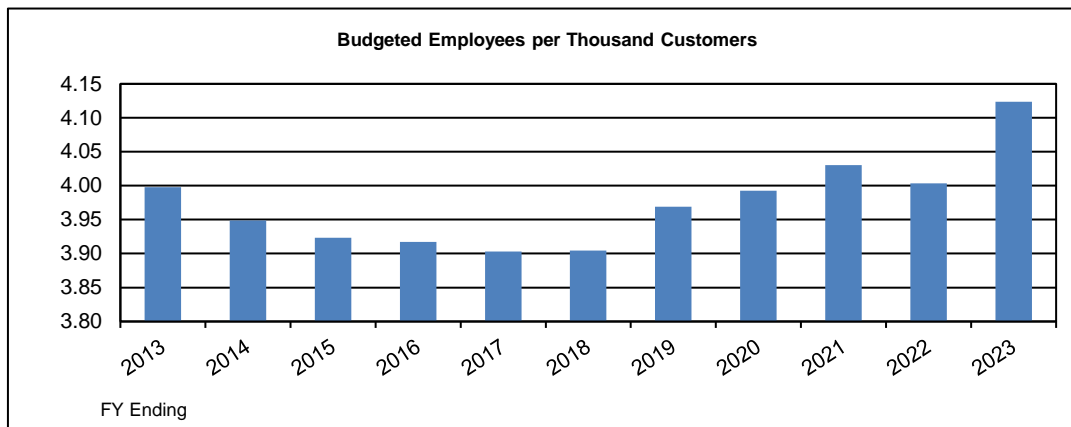

FY 2023-2024 DETAIL BUDGET

The Fiscal Year 2023–2024 budget reflects the PSB’s Strategic Plan goals and objectives and is a balanced budget, with the revenue and other financing sources equal to the expenditures and other financing uses. The FY 2023-2024 budget includes a sizable response to the aftermath of the recent monsoon season and the Frontera wastewater emergency which have driven a reprioritization of projects; an increase in investment is necessary to address expensive and urgent infrastructure needs. The Utility adopted a nine percent water and a 40% wastewater rate increase. Some of the highlights of the FY 2023-2024 operating budget are as follows. The operating budget increased by \$13.1 million mainly as a result of the following:

- \$2.9 million increase in utilities expense
- \$1.2 million increase in miscellaneous expenses mainly for increases in software and hardware
- In addition, there was an increase of \$8.8 million for salary adjustments and to fund 58 new positions identified in the table below:

Change in Staffing	
Section	Number of Positions
Administration	+2
Engineering	+2
Financial and Support Services	+19
Information Technology	+6
Operations Support	+8
Operations Water	+10
Operations Wastewater	+11
Net Change, All Divisions FY 2023-2024	+58 positions

The Utility’s ratio of employees to 1,000 customers has been reduced by 20% from 5.0 in 1996 to 4.1 employees per 1,000 customers budgeted in FY 2023-2024. In FY 2023-2024, this ratio increased by 0.12 employees due to an increase of 3,751 customers with 58 new positions added.

REVENUES AND OTHER FINANCING SOURCES

Water – Water revenues are funds generated for providing potable water service to customers and fire protection. Water revenue for FY 2023-2024 is estimated at \$161.7 million and reflects an increase of \$15.7 million in billed water compared to the budgeted water revenue for the previous year due to an approved nine percent revenue adjustment and normal customer growth.

Wastewater – Wastewater revenues are generated from providing wastewater treatment services to customers. Wastewater revenue for FY 2023-2024 is estimated to be

\$158.5 million reflecting an approved 40 percent revenue adjustment and normal customer growth.

Water Supply Replacement Charge – Water Supply Replacement Charge (WSRC) is restricted revenue used for the costs of attaining future water supplies and the infrastructure associated with it. The revenue source is estimated to be \$39.1 million for FY 2023-2024, which includes a nine percent revenue adjustment. As of March 1, 2017, all meter accounts with monthly water consumption of fewer than 4 CCFs are not charged the WSRC. This fee waiver was approved by the PSB to help low-volume users. In 2021-2022 an average of 48,000 customers on a monthly basis had this fee waived, and the total amount of waived fees for the year was over \$6.4 million.

Debt and Restricted Funds Proceeds – These are restricted funds available from cash funding available for CIP, proposed and previously issued bonds and new Commercial Paper used to finance the capital improvement program. For FY 2023-2024 the Utility budgeted \$425.2 million from these sources of funds.

Franchise Fee Revenue– Effective March 1, 2020, the City of El Paso increased the franchise fee from \$3.55 million to \$6.55 million annually. City Council approved the fee as a means to compensate the City of El Paso for the Utilities' use of city streets and the rights of way for projects and wear and tear on City streets. The monthly fee is billed to all inside City customers based on meter size.

Reclaimed – Reclaimed water revenues are funds generated for supplying advanced secondary and tertiary reuse water services. This revenue source is estimated to generate \$5.8 million in FY 2023-2024. The new reclaimed water rate includes an approved 13 percent revenue adjustment. The rate adjustment includes the eight year of an approved 10-year gradual reduction in the subsidy of the reclaimed water rate.

Interest Income – This category includes interest earned from investments, other cash management functions, and notes receivable. This revenue source is estimated at \$13.0 million for FY 2023-2024. Interest rates are expected to be higher in 2023 with the anticipation of three additional small increases in the Federal Funds Rate.

Grants – This category includes any funds from federal and state governmental agencies. Almost always these proceeds are for capital improvement projects. Grant proceeds from existing and/or new grants for FY 2023-2024 are estimated to be \$26.1 million, which includes \$20 million of grant funds awarded by the United States Bureau of Reclamation (USBR) for the future construction of the Advance Purified Water Facility.

Farm Lease Revenues– The Utility continues to purchase water rights land in and around Dell City to secure a future water supply, which is included in Region E’s 50-year plan. These water resources will be used for water importation around the year 2050. The Utility has leased out all the farm properties acquired in prior years. The Utility estimates that for FY 2023-2024, farming lease revenues to be \$1.8 million.

Other – This category includes customer service charges, proceeds from the sale of assets such as land; revenues from fees charged for the development of land annexed by the City of El Paso; impact fees from new development other contributions in aid of construction, and lease revenue. The FY 2023-2024 estimated revenue from this source is \$21.5 million, which includes \$10.0 million from land sales, \$4.9 million from miscellaneous service charges, \$950,000 in revenue from annexation fees, \$1.3 million in revenue from impact fees, \$1.0 million from the sale of assets and \$3.3 million from contributions from new customers.

EXPENDITURES AND OTHER FINANCING USES

Capital – Capital expenses include all expenditures for the planning, design, construction, rehabilitation, and/or purchase of assets. Total capital expenses for FY 2023-2024 are estimated to be \$554.1 million, which includes \$6.4 million for equipment. The water capital projects represent 48% of total capital expenditures in FY 2023-2024, with wastewater and reclaimed projects representing 51% and capital equipment representing 1%.

Operating – This category includes expenditures for the operations and maintenance costs of the Utility. It includes salaries, materials and supplies, utilities, and all other expenses. Operating and maintenance expenses for FY 2023-2024 are estimated to be \$144.3 million. This is a 10.0% increase compared to the previous year. This is mainly due to increases of \$8.8 million in salary adjustments and funding of 58 new positions, \$2.9 million in utilities expense, and \$1.2 million in miscellaneous expenses mainly for software and hardware expense of \$2.5 million, and offset by a decrease of \$4.2 million in professional services.

Debt Service – This category includes expenditures for the payment of principal and interest on bonds, debt service reserves, and other debt instruments including Commercial Paper. Debt service for FY 2023-2024 is estimated to be \$129.9 million. This is a \$44.0 million increase over the prior year mainly due to the 2022 and 2022A bond issues of \$573.5 million to fund CIP projects and to refund Commercial Paper. In addition, the Utility for FY 2023-2024 plans to issue an additional \$514.5 million of debt to fund CIP projects and refund Commercial Paper Notes.

Payment to City – 10% of water revenues paid to the City of El Paso's general fund per bond ordinance. For FY 2023-2024, this payment to the City is estimated to be \$20.4 million. This figure is \$1.6 million more than the previous year due to the approved nine percent water revenue adjustment.

Franchise Fee Expense – Effective March 1, 2020, the City of El Paso increased the Utility franchise fee from \$3.55 million to \$6.55 million annually. City Council approved the fee as a means to compensate the City of El Paso for the Utilities' use of city streets and the rights of way for projects and wear and tear on City streets. The monthly fee is billed to all inside City customers.

Contingency – This category allows for unusual, unbudgeted expenses, equivalent to 2.5% of the operating budget. The contingency this year is \$3.6 million.

DEBT SERVICE

The following chart shows, as of February 28, 2023, all outstanding principal and interest owed by EPWater. An adequate level of debt and strong financial positions reflects superior fiscal management that has allowed EPWater to continue to earn among the highest ratings that can be awarded by rating agencies like Standard & Poor's (AA+) and Fitch (AA+). In August 2022, Standard & Poor's reaffirmed the Utility's bonds of AA+ with a Negative Outlook and Fitch Ratings reaffirmed the Utilities bonds of AA+ with a Stable Outlook. In 1997, to leverage the market and be more flexible in financing capital construction projects, the Utility initiated the use of interim commercial paper financing. The credit

agreement, in the amount of \$40 million, is equally and ratably secured by and are payable from the sale of bonds or additional borrowing under the commercial paper program. In July 2015, the Public Service Board approved a resolution selecting Bank of America N.A. as the Liquidity Provider for the Commercial

Paper Program. In August 2018, the agreement was amended to reduce the fees charged and extend the Credit Agreement for three additional years. In August 2021, a second amendment was executed to extend the Credit Agreement for five additional years and includes an option for an additional \$40 million for an aggregate amount of \$80 million. The commercial paper matures from one to 270 days, in January 2023, the latest interest rate was 2.08%. The following table shows all outstanding debt for the Water & Sewer Utility as of February 28, 2023.

<u>Calendar Year</u>	<u>Principal</u>	<u>Interest</u>	<u>Total</u>
2023	\$48,625,000	\$46,728,123	\$95,353,123
2024	51,520,000	46,054,071	97,574,071
2025	52,755,000	44,335,403	97,090,403
2026	54,700,000	42,696,600	97,396,600
2027	56,185,000	41,163,467	97,348,467
2028	60,320,000	39,365,886	99,685,886
2029	58,335,000	37,366,567	95,701,567
2030	60,340,000	35,212,612	95,552,612
2031	62,555,000	32,863,456	95,418,456
2032	55,785,000	30,563,609	86,348,609
2033	57,680,000	28,398,899	86,078,899
2034	55,480,000	26,251,801	81,731,801
2035	55,245,000	24,104,801	79,349,801
2036	48,660,000	22,042,893	70,702,893
2037	43,370,000	20,137,182	63,507,182
2038	37,780,000	18,353,698	56,133,698
2039	33,760,000	16,820,214	50,580,214
2040	30,995,000	15,535,419	46,530,419
2041	29,715,000	14,305,968	44,020,968

<u>Calendar Year</u>	<u>Principal</u>	<u>Interest</u>	<u>Total</u>
2042	27,825,000	13,062,025	40,887,025
2043	28,720,000	11,804,750	40,524,750
2044	30,285,000	10,492,225	40,777,225
2045	31,640,000	9,113,225	40,753,225
2046	33,055,000	7,671,750	40,726,750
2047	34,570,000	6,164,050	40,734,050
2048	36,115,000	4,587,150	40,702,150
2049	17,555,000	3,342,375	20,897,375
2050	18,410,000	2,443,250	20,853,250
2051	19,340,000	1,499,500	20,839,500
2052	20,320,000	508,000	20,828,000
Total	\$1,251,640,000	\$652,988,969	\$1,904,628,969

CUSTOMER IMPACTS

Because of the many factors that go into providing quality water and wastewater services, EPWater must continue its leadership in regional and local planning to ensure that its customers continue to receive the highest quality water and wastewater services at affordable rates. The Utility uses an “excess use” increasing block rate structure to establish its user charges. The rate structure is designed with a water conservation message such that the less water the customer uses, the less per unit the customer will be billed. Each customer determines the block into which he or she will fall based on their **average winter consumption (AWC)**. AWC is the per-month average based on total consumption during the three winter months of December, January, and February. One can think of AWC as your personal yardstick, against which your water and wastewater use is measured. New customers who have not established an AWC are assigned the AWC based on the meter size for their classification. New residential homeowners, for example, would be assigned the residential single, 3/4” class average.

On January 11, 2023, PSB meeting, the Board approved to increase from four hundred cubic feet (CCF) to five CCFs, or about 3,740 gallons of water, to be included in the minimum monthly charge for all non-commercial accounts. The minimum monthly charge for a 3/4” x 5/8” meter is \$9.48, and the rate increases depending on the size of the meter.

Water Rate Structure (Residential)

Minimum: up to 5 CCFs

Block 1: over 5 CCFs to 150% of AWC

Block 2: over 150% to 250% of AWC

Block 3: over 250% of AWC

This structure is consistent with the PSB's goal of sending a pricing signal to high water users or users with high or “discretionary” water use. A 17% revenue increase rate adjustment was approved for the FY 2023-2024 budget. The rates effective March 1, 2023, are outlined below:

Block 1	\$3.07 per CCF
Block 2	\$7.25 per CCF
Block 3	\$10.37 per CCF

The formula for determining into which block a customer will fall is based on what multiple of the customer's AWC is used during that billing period.

In February 1996, the PSB adopted a water supply replacement charge (WSRC). This is dedicated revenue to be used for the acquisition of new water resources to meet current and future water demand. The WSRC is a flat monthly fee charged to each water customer, increasing with equivalent meter size. The typical meter size for a single-family detached residence is 3/4” x 5/8” and the WSRC is \$14.04. Effective March 1, 2017, the WSRC is waived for all metered accounts with monthly water consumption of fewer than 4 CCFs. This fee elimination was approved by the PSB to help low-volume users.

The payment to the City of El Paso for ten percent of total water sales was implemented through Ordinance 752 of the City of El Paso which created the PSB and established a monthly ten percent of total water sales payment to the City of El Paso to be paid by EPWater.

Effective March 1, 2020, the City of El Paso increased the franchise fee charged to the Utility to \$6.55 million annually. City Council approved the fee as a means to compensate the City of El Paso for the Utilities' use of city streets and the rights of way for projects and wear and tear on City streets. The monthly fee is billed to all inside City customers.

The wastewater bill is determined by taking 90% of the customer's AWC, then billing a minimum charge of \$27.71 for the first 5 CCFs and \$3.78 per CCF thereafter. The wastewater portion of the bill will then be fixed until the customer's AWC is calculated again next winter. The customer determines their own AWC, meaning they determine their own rates for service. EPWater continues to offer competitive and efficient services in the Border region. A detailed history of water and wastewater rates is included in the Statistical section of this budget document.

It should be noted that EPWater continues to serve its customers in this arid region while maintaining affordable prices. Specifically, the area has the lowest average annual rainfall among any of the arid cities in the survey. The result is that EPWater is able to offer its customers high-quality, affordable cost services and still meet the needs of future generations as well. Proactive planning, regional leadership, visionary management, fiduciary responsibility, and constant communication with the customer will ensure that this will always be the case.

FIVE-YEAR FINANCIAL PLAN

A five-year financial plan is prepared that incorporates best estimates of operating, debt service and capital expenditures over the near-term and projected revenue sources and future revenue requirements. This plan is a guide for management and the Public Service Board to assess and review as it addresses current budget proposals and in considering Utility water, wastewater and reclaimed water initiatives and the short and long-term impact such initiatives will have on the financial condition of the Utility.

Increases in Operating Expenses and Capital Improvement Plan (CIP) Expenditures

The five-year plan includes Operations and Maintenance (O&M) expenses for new infrastructure being placed into service. For FY 2023-2024, there was an increase of \$13.1 million made to the O&M budget mainly due to increases of \$1.2 million in miscellaneous expenses and \$8.8 million in personnel costs due to salary adjustments and an addition of 58 new positions and an increase in utilities of \$2.9 million. CIP Expenditures are estimated at \$547.7 million in FY 2023-2024. The CIP budget includes a sizable funding request driven by prioritization and acceleration of projects and increased overall investment to rehabilitate or replace aging infrastructure to ensure reliability. The major project in FY 2023-2024 is the continuing rehabilitation and expansion of the Roberto Bustamante Wastewater Treatment Plant, which will increase the treatment capacity from 38 MGD to 51 MGD, over the next ten years, the total cost for this project is estimated at \$742 million.

Alternative Revenue Sources

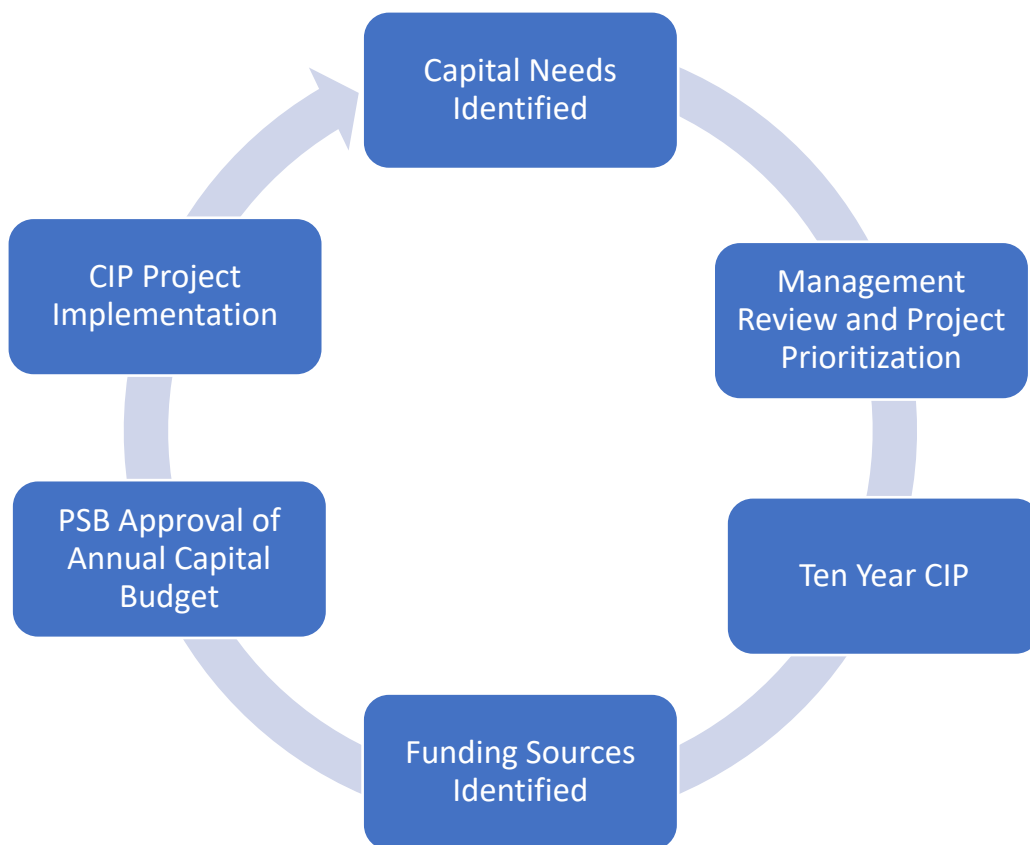

The five-year plan includes several assumptions regarding additional revenue sources. The FY 2023-2024 CIP budget includes new funding of \$667.7 million, including \$432.9 million in new bond issues and \$81.6 million of Commercial Paper Notes for interim financing of water and wastewater projects. In addition, all net proceeds from land sales will be deposited in the Land Reserve Fund, which is restricted to fund future water supply projects including the Kay Bailey Hutchison Desalination Plant expansion, direct potable water projects and the importation of water from areas outside El Paso County. The anticipated sale of land currently owned by the Utility will be a source of revenue for years to come. For FY 2023-2024, \$10 million in land sales are budgeted, with \$10 million projected in the following year. The City of El Paso adopted water and wastewater impact fees in May 2009, we anticipate collecting \$1.3 million in impact fees in FY 2023-2024 and an additional \$4 million in the following four years.

CAPITAL IMPROVEMENTS

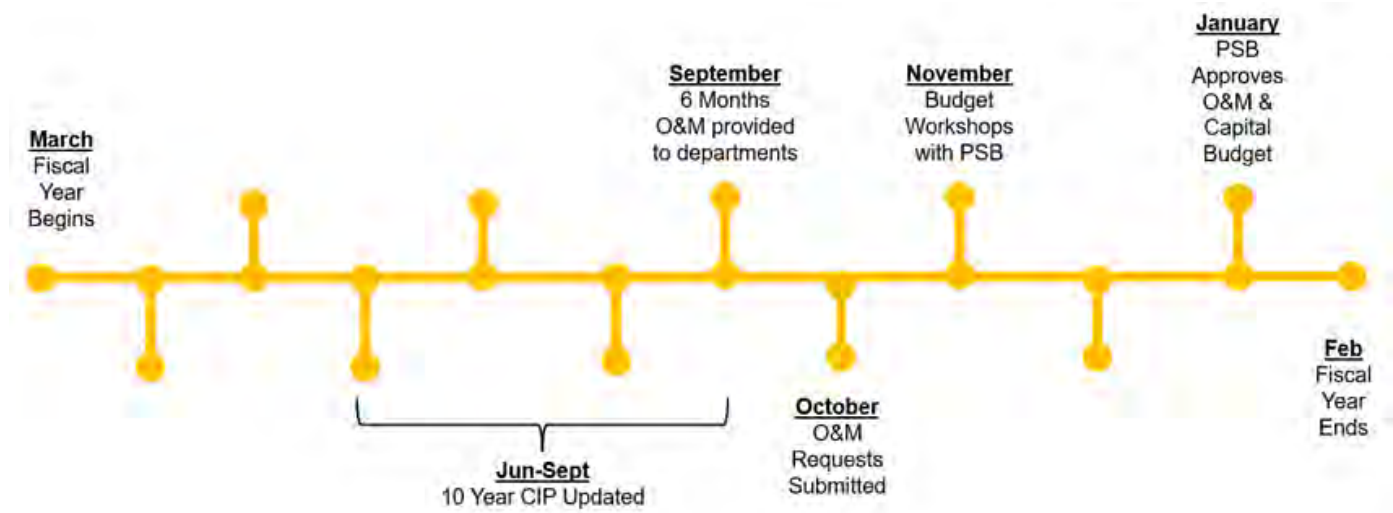

CAPITAL IMPROVEMENTS BUDGET SCHEDULE AND PROCESS

The Utility's Capital Improvement Program (CIP) identifies and prioritizes major new construction and rehabilitation projects to be implemented and funded by EPWater in connection with the company's strategic objectives. The CIP provides information about the infrastructure needs of the Utility in the next ten-year planning horizon with projects prioritized based on our ability to meet customer demand and maintain system reliability. New projects are added, and changes can be made to existing projects based on current information impacting cost and schedules. The CIP is updated for the next ten years with a focus on the first five years, which become part of EPWater's Five Year Financial Plan.

The following diagram depicts the process in which projects become part of the CIP and go from concept to implementation:

The following is a typical schedule for the development of the CIP and its incorporation into EPWater's annual budget:

BUDGET TRENDS IN FY 2022 – 2023

The capital budget for water and wastewater grew from \$237.5 million in FY 2021-2022 to \$538.8 million in FY 2022-2023, an increase of \$301.3 million. Aside from the increased CIP budget, EPWater personnel were challenged by worldwide supply chain issues, labor shortages in the construction industry, and inflation. Supply market conditions caused a shortage of pipe and material components that have led to increased costs and extended project timelines. In response, the Utility implemented strategies to execute projects by hiring additional staff, outsourcing, considering other procurement methods such as CMARs, design build, etc., and sought approval from the Public Service Board for a resolution to expedite procurement of construction contracts. Project plans and timelines were constantly reviewed, risks evaluated, and resources reallocated as needed to move projects forward. EPWater expects to invest \$257.8 million in plant and system improvements in FY 2022-2023, an increase of \$82.4 million over the previous fiscal year.

Highlights of those investments in water infrastructure include:

- \$17.1 million in water treatment facility improvements and rehabilitation
- \$37.0 million for new distribution water lines and rehabilitation of existing water lines
- \$16.6 million to construct new storage tanks and structural improvements to existing reservoirs
- \$24.4 million to construct new wells and rehab existing wells

Highlights of those investments in wastewater infrastructure include:

- \$52.9 million in wastewater treatment facility improvements and rehabilitation, of which \$26.7 million was spent at the Roberto Bustamante Wastewater Treatment plant, followed by \$11.4 million spent at the J.T. Hickerson Wastewater Treatment Plant.
- \$56.7 million for new distribution wastewater lines and rehabilitation of existing lines
- \$7.9 million for lift station improvements

FY 2023 – 2024: MEETING FUTURE DEMANDS

For water and wastewater, assessments of our systems point to major rehabilitation needs. Our budget for capital improvements will grow from \$538.8 million this year to \$554.1 million next year. Half of that will be dedicated to necessary rehabilitation. The \$554.1 million capital budget includes \$547.7 million of projected expenditures for water, reclaimed water and wastewater infrastructure projects, \$6.4 million for equipment, and \$10.7 million of budgeted project overhead. The capital budget continues to address the acquisition of additional water sources, rehabilitation of water and wastewater infrastructure, and new water, wastewater and reclaimed water facilities to meet future demand. To meet the demands of growth both inside and outside the city, several projects are included in the FY 2023-2024 capital budget.

Leading Priorities

Highlights of the projects included in the FY 2023-2024 CIP are listed below based on the following leading priorities:

Water Supply

Reliability

Growth

Modernization

Water Supply

There is a system of equipment and facilities that must be improved annually to ensure groundwater from the Hueco and Mesilla Bolsons and surface water from the Rio Grande is collected, treated, and available to meet current and future water demand. The FY 2023-2024 CIP budget includes the following projects:

- Drilling and equipping new wells
- Rehabilitation of existing wells and well pumping systems
- Electrical improvements at various well sites

The Kay Bailey Hutchison Water Treatment Plant currently has five Reverse Osmosis (RO) Skids which can each treat and convert three million gallons per day (MGD) of brackish water into drinking water. A project to install a sixth skid is in progress which will increase total blended water production from 27 to 33 MGD. Long lead-time material will be pre-purchased in FY 2023-2024, with installation completed the following fiscal year.

Design continues for the Advanced Water Purification Plant with pre-construction services starting in FY 2024-2025. The plant will treat secondary clarifier effluent from the Bustamante Wastewater Plant for transmission directly to the potable water distribution system.

Kay Bailey Hutchison
Water Treatment Plant

Advanced Water
Purification Plant

Reliability

Each water and wastewater rehabilitation or replacement project provides the opportunity to improve the system by improving overall efficiency, inter-operability, and accessibility. The following sections list the major projects from each category scheduled to begin construction in FY 2023-2024:

Water Pipelines \$99.2 million

- City of El Paso CDB Paving Projects
- TXDOT Roadway Improvement Projects
- Routine Pipeline Replacement
- Airport Well Collector 30" Main Replacement
- Heath de Leon from Pump Station to Festival Tank Waterline (30")
- Planned Waterline Replacement Program

Wastewater Pipelines \$58.1 million

- Routine Sewer Line Replacement
- Frontera Force Main Rehabilitation Phase 3
- City of El Paso Paving Projects
- Northwest County Wastewater System

Water Storage Facilities \$23.3 million

Water tanks are an important visible component of the water system. The tank can impact water supply, water quality, and service delivery. The following projects in the FY 2023-2024 CIP address the rehabilitation or replacement of water tanks:

- Sunset Tank Rehabilitation
- Winton (Westway) 1.25MG Tank
- Pico Norte Elevated Tank

- Heath De Leon Tank and Pumping System
- Eastwood Reservoir Roof Improvements
- Sierra Crest 1 and 2, Mountain Park 2 Tank Rehabilitation

Pumping Systems

Pumping systems are a crucial component of both the water and wastewater systems. Projects included in the FY 2023-2024 budget include:

Water \$21.3 million

- Airport Booster Station Replacement
- Joe Caro Pump Station Improvements

Wastewater \$16 million

- Routine Lift Station Rehabilitation
- Northeast Dyer/RR Lift Station seven MGD
- Frontera Lift Station Pump Replacement
- Alfalfa Lift Station Rehab and six MGD Upgrade

Wastewater Treatment Plants

A major expansion will begin at the Roberto Bustamante Wastewater Treatment Plant which was built in 1991. The plant has a 39 million gallons per day treatment capacity and is nearing 75% of the permitted flow. Texas Commission on Environmental Quality (TCEQ) requires planning for an expansion of a wastewater treatment plant once 75% of flow capacity is exceeded. The expansion and all other rehabilitation projects ongoing in this plant are estimated to cost \$149.2 million in FY 2023-2024 and over the next ten years the expansion to increase capacity to 52 MGD and rehabilitation of the plant will cost approximately \$769 million.

Other Projects

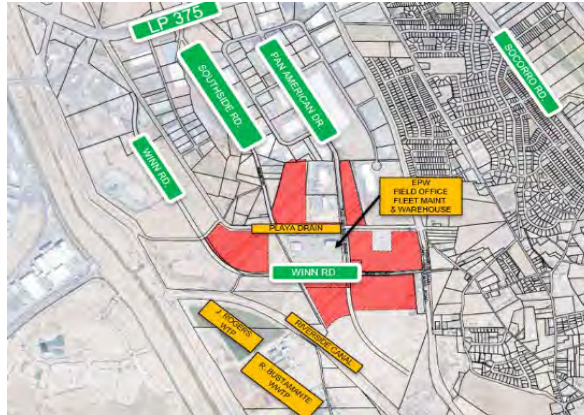

Backup Power Generators and Diesel Fuel Storage

The 87th Texas Legislature adopted Senate Bill 3, which establishes specific requirements for electric and water utilities to improve and harden facilities to ensure reliable service. EPWater developed an Emergency Preparedness Plan (EPP) to detect critical facilities to ensure service to customers during an extended electric utility outage. The EPP identified engine generators needing improvements at 24 facilities throughout the system. The project will include the purchase of new generators and/or the replacement of existing ones at well sites, pumping stations, and at water and wastewater treatment facilities. The project will also include

the installation of aboveground diesel fuel storage and dispensing systems at two sites. Over the next five years, the Utility estimates spending around \$85 million on backup power projects.

Riverside International Industrial Center Improvements Phase 3

Land in southeast El Paso near the Zaragoza International Port-of-Entry is being developed to lease to large manufacturing, warehousing, and industrial tenants. Phase 3 of the project is scheduled to begin in FY 2023-2024 and will include installing all utilities and the extension of Pan American Road.

Growth

Growth can be seen in the westside, northeast, and eastside portions of the city and several projects are expected to begin construction in FY 2023-2024, providing service in those areas. They include:

- Canutillo Upper Valley Transmission Main Northwest Phase IV
- Redd Road 42" Transmission Main Extension (Imperial Ridge - Westwind)
- John Hayes 24" Water Main Extension (Montwood to Pellicano)
- Northeast Interceptor System
- Sean Haggerty Phase 1 - 27" Sewer Main
- Northeast Dyer/Railroad Interceptor Phase 3

Modernization

Planning for the New EPWater Administration Building began in 2018 and the new 57,000 square ft. building will have 300 workspaces, a PSB Boardroom, an employee break room, lobby, bridges, courtyards, meeting rooms, and landscaping. Construction will begin with the parking structure and will continue for several fiscal years with the construction of the new building and the demolition of the existing one. The new building is estimated to be completed by 2025.

Information Technology and Automation

The FY 2023-2024 CIP continues with investments in software, hardware, licensing, and governance of the company's systems. Improvements include:

- Upgrades to the PeopleSoft Financial and HR Benefits
- Evaluation of an Asset Management system
- Installation of audio-visual equipment at various facilities

- Several SCADA upgrades systemwide
- Instrumentation protection from lightning at field stations

Grants

EPWater continues to be aggressive in applying for and successfully receiving state and federal grants to partially fund capital projects. The project to construct the Advanced Water Purification Facility was awarded \$20 million in federal funding from President Biden's Bipartisan Infrastructure Law for water reuse projects through the Bureau of Reclamation. EPWater was the only Texas water utility to be among the selected recipients of a combined \$309.8 million to improve drought resilience. EPWater entered an Interlocal and Subrecipient Agreement for the Provision of First Time and Water and Wastewater Services with the County of El Paso (County). The County received funds from the American Rescue Plan Act (ARP) administered by the United States Department of Treasury. The County has provided \$11 million in funds that will pay for the Utility to manage the procurement of construction services and oversee construction and will accept these assets as part of the water and wastewater systems upon completion of the projects.

NEW FUNDING REQUEST

FISCAL YEAR 2023-2024

PROGRAM:	New Well Construction, Equipping, and Testing	W010000
PROGRAM CATEGORY	WATER SUPPLY FACILITIES	
DESCRIPTION	Drilling and/or equipping of new wells for additional water supply.	
Total Funding Request	\$18,606,000	
Funding Sources	WSRCIMP	
FY 2023-2024 Projected Expenditures	\$16,383,000	
Total Project Cost	\$30,388,000	
Impact on Operating Budget	Yes	

PROGRAM:	Advanced Water Purification	W010002
PROGRAM CATEGORY	WATER SUPPLY FACILITIES	
DESCRIPTION	Design and construction of the Advanced Water Purification Plant.	
Total Funding Request	\$20,000,000	
Funding Sources	GRANT	
FY 2023-2024 Projected Expenditures	\$2,853,000	
Total Project Cost	\$170,000,000	
Impact on Operating Budget	Yes	

PROGRAM:	Northeast Aquifer Storage & Recovery	W010004
PROGRAM CATEGORY	WATER SUPPLY FACILITIES	
DESCRIPTION	Construction of Phase 1b of the Enhanced Arroyo Upgrades.	
Total Funding Request	\$11,412,000	
Funding Sources	WSRCIMP	
FY 2023-2024 Projected Expenditures	\$6,020,000	
Total Project Cost	\$17,600,000	
Impact on Operating Budget	Yes	

PROGRAM:	Water Rights Including Land Acquisitions	W010005
PROGRAM CATEGORY	WATER SUPPLY FACILITIES	
DESCRIPTION	Planning and funding for Water Rights and Land Acquisition.	
Total Funding Request	\$6,513,000	
Funding Sources	WSRCIMP	
FY 2023-2024 Projected Expenditures	\$9,500,000	
Total Project Cost	\$10,675,000	
Impact on Operating Budget	No	

NEW FUNDING REQUEST

FISCAL YEAR 2023-2024

PROGRAM:	Heath De Leon Tank	W020008
PROGRAM CATEGORY	WATER SUPPLY FACILITIES	
DESCRIPTION	Construction of new water tank.	
Total Funding Request	\$21,200,000	
Funding Sources	CP	
FY 2023-2024 Projected Expenditures	\$530,000	
Total Project Cost	\$22,204,000	
Impact on Operating Budget	Yes	

PROGRAM:	CCC1 PZ Improvement-Conveyance	W040035
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Design and construction of Redd Road waterline and mater mains from I-10 to Westway/Vinton.	
Total Funding Request	\$10,582,000	
Funding Sources	CP	
FY 2023-2024 Projected Expenditures	\$1,087,000	
Total Project Cost	\$10,802,000	
Impact on Operating Budget	Yes	

PROGRAM:	Canutillo Upper Valley Transmission Main Northwest Phase IV (IF)	W040052
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Construction of Canutillo Upper Valley Transmission Main water line Phase IV.	
Total Funding Request	\$15,043,000	
Funding Sources	IMP - \$5,000,000 IMPACTFEE - \$1,000,000 CP - \$9,043,000	
FY 2023-2024 Projected Expenditures	\$2,100,000	
Total Project Cost	\$16,096,000	
Impact on Operating Budget	Yes	

PROGRAM:	Planned Waterline Replacement	W040068
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Design and construction of projects from the planned waterline replacement program and those utilizing an on-call construction contract.	
Total Funding Request	\$16,617,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$14,865,000	
Total Project Cost	\$19,780,000	
Impact on Operating Budget	No	

NEW FUNDING REQUEST

FISCAL YEAR 2023-2024

PROGRAM: Northwest County Water System		W040075
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Construction of first-time water services in the Northwest areas of the County of El Paso.	
Total Funding Request	\$936,000	
Funding Sources	GRANT	
FY 2023-2024 Projected Expenditures	\$713,000	
Total Project Cost	\$1,181,000	
Impact on Operating Budget	Yes	

PROGRAM: EPWater Headquarters New Building		W080033
PROGRAM CATEGORY	OTHER MAJOR CAPITAL PROJECTS	
DESCRIPTION	CMAR preconstruction services and early package construction for new administration building.	
Total Funding Request	\$52,601,000	
Funding Sources	BONDS	
FY 2023-2024 Projected Expenditures	\$7,150,000	
Total Project Cost	\$66,350,000	
Impact on Operating Budget	Yes

NEW FUNDING REQUEST

FISCAL YEAR 2023-2024

PROGRAM: Lift Station Replacements		S030010
PROGRAM CATEGORY	PUMPING SYSTEMS	
DESCRIPTION	Rehabilitation of Mesa Del Castillos, Electric Plant, Prado, Mansfield, and Knowles Lift Stations.	
Total Funding Request	\$12,025,000	
Funding Sources	CP	
FY 2023-2024 Projected Expenditures	\$4,128,000	
Total Project Cost	\$12,257,000	
Impact on Operating Budget	No	

PROGRAM: Valve Rehabilitation		S030015
PROGRAM CATEGORY	PUMPING SYSTEMS	
DESCRIPTION	Replacement of air release valves at various westside pipeline locations.	
Total Funding Request	\$1,883,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$540,000	
Total Project Cost	\$2,576,000	
Impact on Operating Budget	No	

PROGRAM: Frontera Lift Station Pump Replacement		S030017
PROGRAM CATEGORY	PUMPING SYSTEMS	
DESCRIPTION	Design and construction of pump replacement for Frontera Lift Station.	
Total Funding Request	\$1,387,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$805,000	
Total Project Cost	\$3,822,000	
Impact on Operating Budget	No	

PROGRAM: Lift Station Decommissioning		S030029
PROGRAM CATEGORY	PUMPING SYSTEMS	
DESCRIPTION	Decommissioning of the a lift station.	
Total Funding Request	\$2,159,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$506,000	
Total Project Cost	\$2,548,000	
Impact on Operating Budget	No	

NEW FUNDING REQUEST

FISCAL YEAR 2023-2024

PROGRAM:	Alfalfa Lift Station Rehab & 6MGD Upgrade (Alternatives to RRB Exp)	S030132
PROGRAM CATEGORY	PUMPING SYSTEMS	
DESCRIPTION	Design of the Alfalfa Lift Station rehabilitation and upgrade.	
Total Funding Request	\$905,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$1,062,000	
Total Project Cost	\$18,790,000	
Impact on Operating Budget	Yes	

PROGRAM:	Northwest County Wastewater System	S040041
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Construction of first-time wastewater services in the Northwest areas of the County of El Paso.	
Total Funding Request	\$5,154,000	
Funding Sources	GRANT	
FY 2023-2024 Projected Expenditures	\$2,732,000	
Total Project Cost	\$5,514,000	
Impact on Operating Budget	Yes	

PROGRAM:	Boone Interceptor	S040055
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Construction of Boone Interceptor Phase 2A.	
Total Funding Request	\$2,108,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$1,230,000	
Total Project Cost	\$4,762,000	
Impact on Operating Budget	No	

PROGRAM:	Upper Valley Outfall Relocation	S040056
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Construction to relocate wastewater outfall at Upper Valley Wastewater Treatment Plan in conjunction with International Boundary Water Commission.	
Total Funding Request	\$690,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$177,000	
Total Project Cost	\$990,000	
Impact on Operating Budget	No	

NEW FUNDING REQUEST

FISCAL YEAR 2023-2024

PROGRAM: Stormwater Utility Relocation - Wastewater		S040061
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Construction of sewer line relocations for stormwater projects.	
Total Funding Request	\$590,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$750,000	
Total Project Cost	\$1,250,000	
Impact on Operating Budget	No	

PROGRAM: City of El Paso Paving Projects		S040063
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Construction of sewer line replacements for City of El Paso Paving projects.	
Total Funding Request	\$2,550,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$5,441,000	
Total Project Cost	\$5,441,000	
Impact on Operating Budget	No	

PROGRAM: TXDOT Roadway Improvement Projects		S040064
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Construction of sewer line replacements and relocations for TxDOT Roadway Improvement Projects.	
Total Funding Request	\$4,009,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$3,000,000	
Total Project Cost	\$6,900,000	
Impact on Operating Budget	No	

PROGRAM: Rehabilitation of Manholes		S040066
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Rehabilitation of manholes citywide.	
Total Funding Request	\$3,826,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$2,000,000

Impact on Operating Budget	Yes	

PROGRAM: Checklist Automation (SCADA) Treatment Facilities		S070005
PROGRAM CATEGORY	INFORMATION TECHNOLOGY	
DESCRIPTION	Purchase of software and hardware for SCADA improvements.	
Total Funding Request	\$910,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$910,000	
Total Project Cost	\$4,000,000	
Impact on Operating Budget	Yes	

NEW FUNDING REQUEST

FISCAL YEAR 2023-2024

PROGRAM:	Energy Management Master Plan	S080015
PROGRAM CATEGORY	OTHER MAJOR SEWER CAPITAL PROJECTS	
DESCRIPTION	Improvements to power monitoring equipment at wastewater treatment facilities.	
Total Funding Request	\$2,246,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$4,213,000	
Total Project Cost	\$8,487,000	
Impact on Operating Budget	Yes	

PROGRAM:	PSB Facilities Rehabilitation	S080029
PROGRAM CATEGORY	OTHER MAJOR SEWER CAPITAL PROJECTS	
DESCRIPTION	Design and construction for rehabilitation of El Paso Water facilities.	
Total Funding Request	\$2,489,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$3,647,000	
Total Project Cost	\$6,395,000	
Impact on Operating Budget	No	

PROGRAM:	Roberto R. Bustamante WRP Upgrades & Rehabilitation	S090010
PROGRAM CATEGORY	TREATMENT	
DESCRIPTION	Headworks, Grit, and Screens Improvements, digester rehabilitation, facility expansion and various upgrades.	
Total Funding Request	\$322,025,000	
Funding Sources	BONDS	
FY 2023-2024 Projected Expenditures	\$149,204,000	
Total Project Cost	\$730,000,000	
Impact on Operating Budget	Yes	

PROGRAM:	Haskell R. Street WWTP Upgrades & Rehabilitation	S090011
PROGRAM CATEGORY	TREATMENT	
DESCRIPTION	Design and construction of odor control, clarifier, blower, grit removal, and chlorine scrubber improvements.	
Total Funding Request	\$8,664,000	
Funding Sources	IMP	
FY 2023-2024 Projected Expenditures	\$8,372,000	
Total Project Cost	\$45,173,000	
Impact on Operating Budget	Yes	

NEW FUNDING REQUEST

FISCAL YEAR 2023-2024

PROGRAM: John T. Hickerson WRP Upgrades & Rehabilitation		S090012
PROGRAM CATEGORY	TREATMENT	
DESCRIPTION	Design and construction of aeration basin gate, belt filter press, dissolved air flotation, odor control, and screen improvements	
Total Funding Request	\$15,750,000	
Funding Sources	BONDS	
FY 2023-2024 Projected Expenditures	\$13,240,000

115 COMMUNICATION & GOVERNMENT AFFAIRS

ADMINISTRATION

FUNCTION:

Responsible for enhancing the reputation of the utility and building trust with customers, elected officials, employees and other stakeholders. The team develops and implements communications and government affairs strategies and tactics to support the utility's strategic objectives.

Communications programs include: public service campaigns, media relations, community relations, construction outreach, utility special events, issue management, crisis communication, branding and digital presence (web/videos/social media), employee communication, and customer communication.

Government relations initiatives include: monitoring legislative and regulatory developments; representing and advocating on behalf of the utility before key local, state, and federal government officials or agencies; identifying and pursuing federal and state funding opportunities, applying for grants; and working with government agencies to secure other non-grant funding.

Initiatives related specifically to the Department of Defense and Fort Bliss include overseeing and growing a new EPWater revenue source: the Intergovernmental Support Agreement (IGSA). Under this agreement, EPWater provides goods and services to Fort Bliss at cost plus a 5% administrative fee, generating revenue for the utility while lowering costs for the Army at Fort Bliss. Additionally, the collaboration better positions the utility to compete for DOD-related grants.

130 WATER RESOURCES MANAGEMENT

ADMINISTRATION

FUNCTION:

Design and prepare specifications for water supply projects including desalination, well drilling, well equipping, and water resource investigations. Provide technical and administrative support to EPWater Operations in the Well Maintenance program. Responsible for TCEQ UIC reporting and compliance monitoring for concentrate disposal wells. Design and construct monitoring and injection wells; plan and supervise the well plugging as part of a wellhead protection program; determine future groundwater requirements and plan and execute a drilling program to fit future needs; develop and maintain groundwater models to help manage groundwater resources; maintain and update databases for hydro-geologic information to be provided to individual stakeholders; review and process applications for drilling wells in the City of El Paso; coordinate with other agencies including USGS, IBWC, TCEQ, and TWDB in collecting and sharing hydrologic data. Provide technical and administrative support for EPWater's participation in Far West Texas Regional Water Planning. Prepare Far West Texas Water Plan (50-year plan) in accordance with TWDB requirements. Obtain TCEQ approval for new well construction; provide technical review and support of EPWater Engineering and other sections.

140 LAND MANAGEMENT

ADMINISTRATION

FUNCTION:

Administer the real properties for EPWater, except those used directly as a part of system operation. Purchase land for stormwater, water rights purposes, or other needs, and acquire rights-of-way required for system growth, improvements, and water rights. Process the sale of selected land, perform property improvements, lease PSB properties, and coordinate land matters with other agencies. To effectively allow the Utility to determine a long-range plan of achievable goals, including sustainable development, obtaining necessary water rights for continued supply and growth, and initiate and conclude studies regarding water supply. Conduct landowner contacts, marketing efforts, and documentation preparations to acquire additional rights to surface water through irrigation district. Participate with the City of El Paso's Planning Department on zoning ordinance as required, and in implementing the City Comprehensive Plan. Provide in house EPWater expertise, review and participation for environmental assessments on EPWater and other local projects.

150 TECH₂O CENTER AND WATER CONSERVATION**ADMINISTRATION****FUNCTION:**

Responsible for promoting water conservation among residential and commercial customers, and next generation customers. The team develops and implements educational and public information programs to increase awareness of regional water issues and the actions we all can take to conserve water. Serves as a liaison with the Texas Water Development Board (TWDB) on conservation issues and ensures that the utility develops and submits our five-year Conservation Plan to TWDB. Tracks best management practices, assesses opportunities for continued improvement in conservation practices, and takes actions consistent with utility strategy. Provides an event venue for employee training/events and for stakeholders to convene around water, wastewater and stormwater issues of relevance to the utility.

320 PLANNING AND DEVELOPMENT

TECHNICAL SERVICES

FUNCTION:

New Installations: Process and collect charges for new service installations (water and/or sewer) as established by PSB Rules and Regulations. Process and collect impact fees for new water and sanitary sewer service installations as established by PSB Rules and Regulations. Maintain and administer records regarding past developments and existing services. Prepare and process paving cut permits for new installations.

Development Services: Prepare water and sanitary sewer availability comments for properties to assist in potential land development. Prepare (or review) water and sewer design plans for new developments. Prepare development agreements related to new water and sanitary sewer extensions in residential subdivisions and commercial developments. Attend meetings and prepare comments to the Development Coordinating Committee (DCC) and the City Planning Commission (CPC) regarding rezoning requests, development of master plans, detailed site plans, and proposed subdivisions. Provide technical assistance in the preparation and submittal of grant funding requests. Design, coordinate and manage in-house water and sewer projects that are development driven.

Planning: Perform water and sewer planning analysis and hydraulic modeling analysis to determine the size of facilities and/or required facilities upgrades. Prepare cost estimates for proposed major infrastructure.

Field Inspections – Water and Sewer: Provide line and grade for construction of water and sewer mains and related structures. Perform land surveying for laying out or defining properties and easements. Obtain as-built information on water and sewer construction. Provide inspection of water and sewer work performed by contractors except projects engineered by consultants. Prepare completion certificates for the conveyance of facilities constructed under Developer Agreements. Mark the location of water, reclaimed water and sewer mains for contractors, plumbers, and other utility companies.

Field Inspections – Paving: Provide backfill, 2-sack and paving inspections for work performed by EPWater crews or EPWater projects.

420 WATER PRODUCTION**WATER****FUNCTION:**

Maintain and operate 120 wells, 82 potable reservoirs, 225 boosters, and 53 booster stations equipped with chlorination equipment for the purpose of providing, at an adequate pressure, a supply of safe water demanded by the public, including fire protection. Schedule the operation and maintenance of equipment to stabilize water pressure for the City and adjacent areas. Operate a computer supervisory control and data acquisition system (SCADA) to improve the overall operation of the water system. Maintain all pumping equipment, including wells and boosters. In addition, we operate, maintain and monitor six reclaim booster stations, seven reuse water reservoirs, and 21 reuse boosters.

440 WATER DISTRIBUTION**WATER****FUNCTION:**

Provide preventive and emergency maintenance of all water distribution systems, including over 2,700 miles of water mains and over 200,000 water service connections, fire hydrants, and valves. Perform construction of these facilities as required and supervise water main installations. Three crews are assigned to the pipe replacement program, and one crew to new construction and miscellaneous extensions. Operate and supervise the dispatch center.

450 JONATHAN ROGERS WATER TREATMENT PLANT

WATER

FUNCTION:

The primary function of this plant is to treat surface water from the Rio Grande River and produce water that meets all standards of the SDWA, EPA, and the State of Texas, and to maintain all equipment and structures at the treatment plant in order to receive, treat, and distribute the maximum volume of water from available raw water sources. The Jonathan W. Rogers WTP has a capacity to treat 60 MGD.

470 UPPER VALLEY WATER TREATMENT PLANT

WATER

Responsible for treating Mesilla Bolson groundwater from the Tom Cliett well field to achieve compliance with the EPA Arsenic Rule and to maintain all equipment and structures at the water treatment plant. The Upper Valley Treatment Plant will treat 30 million gallons per day of groundwater from the Canutillo Well Field and blend with up to another 30 MGD of untreated groundwater to produce blended finished water with an arsenic concentration of eight ppb or less.

480 KAY BAILEY HUTCHISON DESALINATION PLANT**WATER PLANT****FUNCTION:**

Operate the well field, and the blend wells in conjunction with the desalination plant. This state-of-the-art desalination facility applies an innovative reverse osmosis technology to convert brackish groundwater to high quality drinking water that will provide a reliable supply for many years to come and extend the life of the freshwater portion of the Hueco Bolson.

490 RECLAIMED WATER SYSTEM

WATER

FUNCTION:

Provide reclaimed water for irrigation, construction and industrial use to various public and private entities and reduce the demands on the potable water supplies and distribution system. Assure proper maintenance and operation of these systems and their component facilities and support the inclusion of current works in progress into the future system. Assist very large water users in meeting recycling demands. Assist customers to maximize the beneficial use of reclaimed water.

520 ENVIRONMENTAL COMPLIANCE AND INDUSTRIAL PRETREATMENT

OPERATIONS SUPPORT

FUNCTION:

Support Water and Wastewater Divisions in complying with federal, state, and local environmental regulations to protect the integrity and functions of the collection system and wastewater treatment plant processes. Permit, investigate, monitor, and regulate wastewater generated by industrial and commercial customers that may enter the wastewater collection and treatment system. Ensure compliance with the requirements of the Clean Water Act and conduct related special assignments. Assist other departments and City and State agencies to prevent and address adverse effects on the environment from industrial and commercial sources. Initiate enforcement action, if necessary.

BUDGET TO ACTUAL AND BUDGETED PERSONNEL

580 PLANT EQUIPMENT MAINTENANCE

OPERATIONS SUPPORT

FUNCTION:

Provide equipment maintenance services and maintain Computer Maintenance Management System (CMMS) database for the water and wastewater treatment plants and pumping facilities. Provide trained mechanic personnel to respond to routine and critical plant situations. Utilize diagnostic devices, training, and comprehensive reporting used as the basis for predictive and predictive maintenance programs. Provide full capability maintenance machine shop for metalwork needs and for motor testing. Identify, plan, budget, provide technical reviews, and monitor the 10-year Capital Improvement Project plan to enhance the treatment plant life cycle, process optimization, and energy conservation; and to ensure safe, reliable, and economical processes in compliance with regulatory requirements and in accordance with PSB rules and regulations.

620 WASTEWATER LIFT STATIONS

WASTEWATER

FUNCTION:

Responsible for the 24-hour operation and maintenance of 76 lift stations throughout the sewer collection system. The system is comprised of approximately 170 pumps, six compressors, three vacuum pumps, and 24 diesel and natural gas engine generators. Pump capacities range from 50 to 7,777 gallons per minute per unit, and electric motors and control panels ranging from three to 350 HP per unit. We also provide odor control measures and maintain supervisory control and data acquisition (SCADA) control panels for the Utility's alarm system. Responsible for the operation and maintenance of 22 storm water pump stations with pumps ranging from three to 476 horsepower and capacities of 450 to 70,000 gallons per minute.

640 JOHN T. HICKERSON WATER RECLAMATION FACILITY**WASTEWATER****FUNCTION:**

The John T. Hickerson Water Reclamation Facility is responsible for safely and efficiently receiving, treating, and processing all wastewater generated in the west and northwest part of the City of El Paso. This facility is designed to treat a capacity of 17.5 MGD. The treatment process includes activated sludge, secondary clarification, filtration, ultraviolet disinfection, re-aeration of the final effluent and the treatment of sewer gases with chemical scrubbers for odor control. Part of the plant's effluent is directed to the reclaimed water system where it is stored and used for irrigation by various schools, and businesses in the northwest part of the city. The plant's final effluent is safely discharged into the Rio Grande.

650 HASKELL STREET WASTEWATER TREATMENT PLANT**WASTEWATER****FUNCTION:**

Supervise the 24-hour operation and maintenance of the Haskell R. Street Wastewater Treatment Plant, Which treats all wastewater from Central El Paso, Fort Bliss, and the diversions from the John T. Hickerson Water Reclamation Facility. The activated sludge plant consists of primary treatment, activated sludge treatment which also includes an anoxic selector to recover energy through nitrification/denitrification, final disinfection, dewatering of anaerobic sludge with filter belt presses, and the treatment of sewer gases with chemical and biological scrubbers for odor control. Plant effluent is discharged into the American Canal in return for additional water credits for the surface water plants. The plant also provides reclaimed water to Ascarate Golf Course, South-Central area parks, schools and businesses.

670 ROBERTO BUSTAMANTE WASTEWATER TREATMENT PLANT**WASTEWATER****FUNCTION:**

Responsible for the operation and maintenance of the Roberto R. Bustamante Plant, which treats approximately 30 MGD. The plant treatment process provides primary treatment, conventional activated sludge treatment, final disinfection, anaerobic digesters, belt presses, and gravity belt thickeners. The plant also has a 2 MGD sand filter system with pumping equipment, chlorine addition, and disinfecting capabilities for water re-use for the Riverside International Industrial Center. The plant also provides water to the Rio Bosque Wetlands Park.

690 SYSTEM REPAIR AND CONSTRUCTION**WASTEWATER****FUNCTION:**

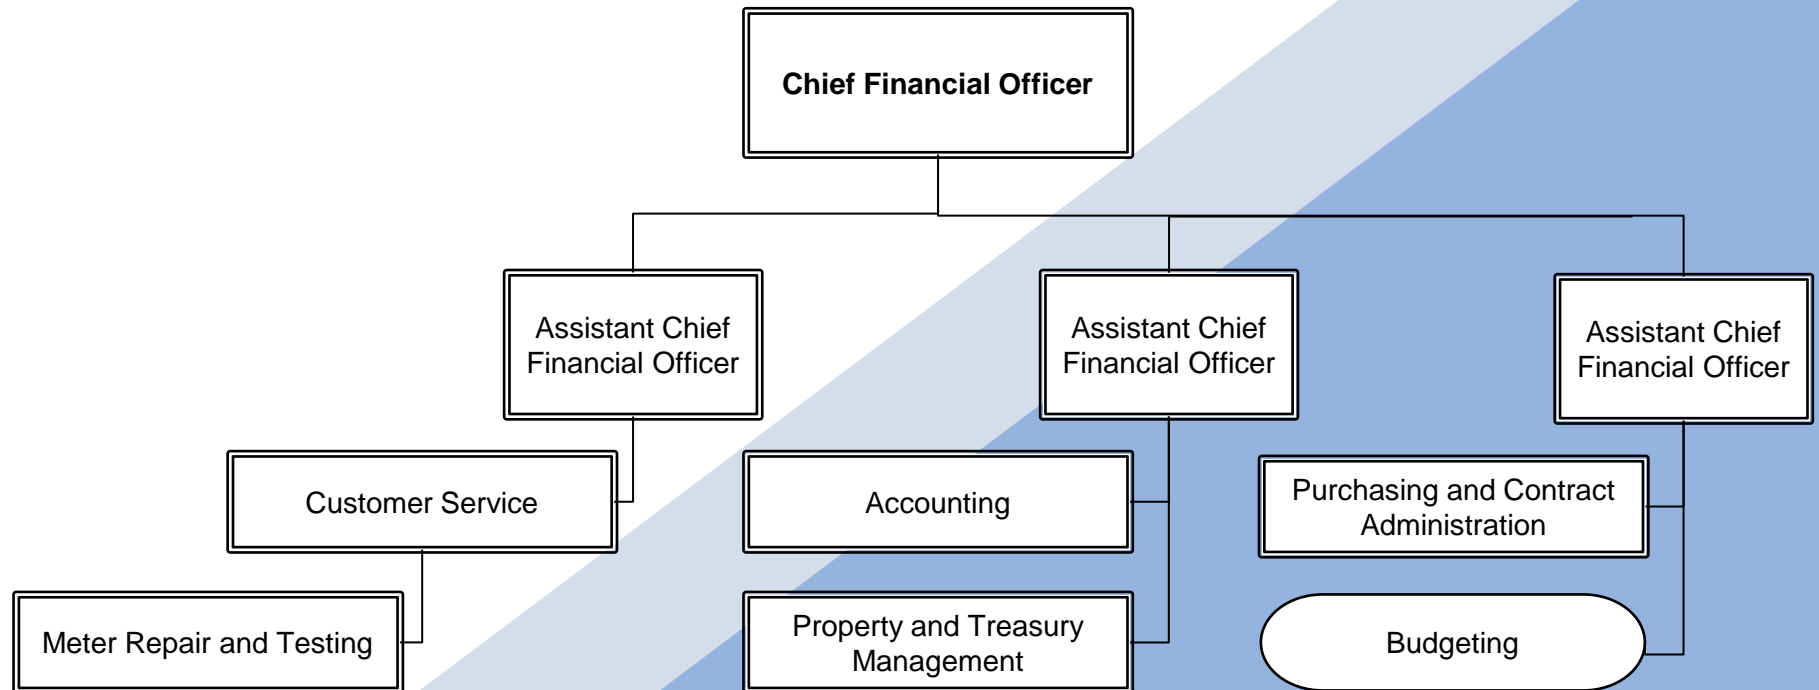

Repair sanitary sewer pipeline system consisting of over 2,385 miles in place. Also, construct new sanitary sewer mains and new sewer main extensions. Construct new manholes when necessary to improve the maintenance of the sewer system. Make large diameter taps to connect new sewer service lines into public sewer mains. Set up dewatering systems where groundwater is present for replacing, repairing, and installing new sewer and water mains. Adjust manhole rings and covers to specific elevation and grades due to city street paving and resurfacing projects. Replace broken and worn-out manhole rings and covers throughout the city. Identify manholes in deteriorated conditions due to hydrogen sulfide (H₂S) gases for rehabilitation purposes.

FINANCIAL AND SUPPORT SERVICES

FUNCTION:

Through direction by the Board and management the Finance section is responsible for ensuring the financial stability of the Utility. Plans, administers, and coordinates all financial and support services operations, including Finance (including: budgeting, debt management and grant management), Accounting, Customer Service (including: meter reading and repair, billing, call center, and field services), Purchasing and Contract Administration, Property and Treasury Management, Cashiering, and the Warehouse. Major responsibilities include overseeing proper procurement of capital, good and services, revenue and expenditures, issuance of debt and management of debt financing instruments, investments and cash management, property control, and producing and presenting executive summary reports for the President and CEO and the Public Service Board. Updates the Five Year Financial Plan annually, in accordance with the policies of the Public Service Board and the direction of management, and prepares and produces the Annual Budget and oversees the Annual Comprehensive Financial Report.

912 METER REPAIR & TESTING

FINANCIAL AND SUPPORT SERVICES

FUNCTION:

Provide in-house repairs, testing, and replacement of ¾" through 12" water meters. Maintain sufficient quantities of new and repaired water meters for use by Utility field crews. Maintain adequate meter parts stock level (new and rebuilt) for proper repair of all sizes of fire hydrant meters. Maintain inventory records on all water meters purchased by the Utility. Record all meter repairs done in the meter shop and in the field, reported by 720, 440 and 320. Provide testing, tagging, and repairing of all water meters purchased by EPWater. Install, repair, test and track all construction fire hydrant meters issued and requested from New Services for contractors at various locations.

825 INSTRUMENTATION AND CONTROLS

INFORMATION TECHNOLOGY

FUNCTION:

Provide installation, maintenance, and support of instrumentation and controls throughout the water and wastewater divisions to facilitate communication to the centralized SCADA (Supervisory Control and Data Acquisition) Systems optimization to effectively monitor and control sites which include systems located at wells, reservoirs, booster stations, lift stations, stormwater pump stations, and treatment plants. The goal is to provide a sufficient level of automated control to maximize the efficiency of operations personnel; and to ensure the adequacy of treatment such that water and wastewater operations are compliant with applicable State and Federal regulations.

UTILITY PROFILE

HISTORY OF THE STORMWATER UTILITY

In 2006, El Paso experienced extreme flooding resulting in damage to much of the infrastructure from stormwater runoff. El Paso was not prepared, and the stormwater system had not been well maintained. Some storm drainage trunk lines, pump stations, channels, and culverts were undersized, and some required major maintenance or repair. The estimated damage at the time to public and private property totaled more than \$250 million. As a result, the City decided that it would create a drainage utility system that would stand alone and be self-sufficient.

City Ordinance No. 016668 established the Stormwater Utility to ensure that the collection, management, and control of stormwater runoff would adequately protect the health, safety, and welfare of the citizens of El Paso. In this ordinance, the EPWater PSB was given responsibility for the establishment of a schedule of drainage charges for all real property in the proposed service area, to provide drainage service for all real property in the proposed area upon payment of drainage charges, and to offer and provide drainage service on nondiscriminatory, reasonable, and equitable terms in accordance with Rules and Regulations as promulgated by the PSB.

City Council's actions were consistent with recommendations made by a consulting firm that assessed stormwater management and organization following "Storm 2006." The assessment found that city stormwater needs had not been adequately funded, and stormwater management, currently shared by several departments, would be better served by a centralized organization. Previously, stormwater services were funded by the City's general fund. However, the consultants recommended establishing a separate user fee to fund stormwater management functions and the City Council agreed.

Within the ordinance, the PSB was granted complete authority and control of the management and operation of the System on behalf of the City. The PSB prepared a Master Stormwater Management Plan (Stormwater Plan), which was approved by the City Council. In developing the Stormwater Plan, the PSB considered the use of open space as natural drainage and the extent reasonably possible to preserve the City's open spaces, greenways, arroyos, and wilderness areas in their natural state. The PSB allocates 10% of the System's annual drainage utility fee for such Green Projects. It also states that at least once a year, beginning with the Fiscal Year ending August 31, 2009, the President/CEO, on behalf of the PSB, shall present to the City Council a report on the status of the System. The ordinance also requires that revenues collected from the drainage utility fees must be segregated and completely identifiable from other City or PSB accounts.

On March 1, 2008, EPWater, under the policy direction of the PSB became responsible for stormwater management in the City of El Paso. Stormwater functions are funded by a fee that appears on the monthly water bill. This fee can only be used exclusively for stormwater purposes. The stormwater charge is not a tax; rather,

it is a user fee calculated for every parcel within the city unless exempted by federal or state law or based on the impervious area of the property, which is consistent with several other cities across the country that use this method of stormwater management.

In January 2017, the PSB directed staff to convene a Stormwater Focus Group to review projects for the Stormwater Master Plan. Through a series of four engagements in 2017 and 2018, the group composed of staff, board members, and different stakeholders were able to complete the following goals:

- Public perspective on the priorities of the stormwater program
- Evaluate scoring criteria
- Evaluate the weight/value for each criteria
- Score each project
- Produce updated project priorities

At the April 11, 2018, meeting, the PSB approved the group's recommendations regarding the Stormwater Capital Improvement Program (CIP) project reprioritization. The FY 2023-2024 CIP includes funding based on the direction of that master plan reprioritization.

FACILITIES

Following "Storm 2006," an evaluation identified extensive damage to the stormwater system. The City began repairing the most severely damaged items; the stormwater utility became responsible for the remaining projects as well as the operation and maintenance of the system and the construction projects needed to reach an adequate level of service.

The facilities the stormwater utility is responsible for operating and maintaining include:

- 22 stormwater pump stations
- 466 ponds comprising 1,866 acres
- 41 dams and basins comprising 1,875 acres
- 74 miles of channels
- 9 miles of agricultural drains
- 344 miles of storm drain conduits
- 7,649 storm drain drop inlets

STRATEGIC PLANNING

The PSB incorporated the Stormwater Utility into its updated strategic plan dated January 2009. The Utility's strategic plan can be found on pages 33 through 43. The specific strategic plan for the Stormwater Utility has been incorporated into the individual sections' goals and objectives for FY 2023-2024.

FINANCIAL POLICIES

The Stormwater Utility is accounted for as a separate Enterprise Fund, which is defined on page 44. Funds collected from the stormwater fees included in the combined water, wastewater, and stormwater bill are segregated from the water and wastewater revenues and accounted for separately.

FLOW OF FUNDS POLICY

The Flow of Funds Policy was established in the first Stormwater Utility bond issue, Series 2009, issued September 29, 2009. In this bond ordinance, the Utility covenants and agrees that all revenues derived from the operation of the System shall be kept separate from other funds of the Utility. To that end, the following special funds were established and shall be maintained at the Depository Bank so long as any of the Bonds similarly secured are outstanding: (i) "City of El Paso, Texas, Municipal Drainage Utility System Revenue Fund" (herein called the "Revenue Fund"); (ii) "City of El Paso, Texas, Municipal Drainage Utility System Bonds Interest and Sinking Fund" (herein called the "Interest and Sinking Fund"); (iii) "City of El Paso, Texas, Municipal Drainage Utility System Bonds Reserve Fund" (herein called the "Reserve Fund"); and (iv) "City of El Paso, Texas, Municipal Drainage Utility System Improvement Fund" (herein called the "Improvement Fund"). The funds are described as follows:

Revenue Fund

All revenues shall be deposited monthly as collected into the Revenue Fund. Funds on deposit in the Revenue Fund shall first be used to pay all operating and maintenance expenses. The Revenues of the System not required to pay operating and maintenance expenses (the "Net Revenues") shall be transferred from the Revenue Fund to the other Funds in this Ordinance, in the order of priority, in the manner, and in the amounts set forth below:

Interest and Sinking Fund

There shall be deposited into the Interest and Sinking Fund the following:

1. Such amounts, in equal monthly installments, commencing on the first day of the month next following the Closing Date and on the first day of each month thereafter, are sufficient to pay the interest scheduled to come due on the Bonds on the next interest payment date, less any amounts already on deposit therein for such purpose derived from the proceeds of the Bonds or any other lawfully available source.
2. Such amounts, in equal monthly installments, commencing on the first day of the month next following the Closing Date and on the first day of each month thereafter, are sufficient to pay the next maturing principal of the Bonds, including any scheduled mandatory redemption of Bonds. The Interest and Sinking Fund shall be used to pay the principal of and interest on the Bonds Similarly Secured as such principal matures and such interest becomes due.

Reserve Fund

As long as the funds on deposit in the Reserve Fund created for the benefit of the Bonds Similarly Secured are equal to the Reserve Fund Requirement, there is no need to deposit funds to the credit of the Reserve Fund. However, should the Reserve Fund at any time contain less than the Reserve Fund Requirement, then, subject and subordinate to making the required deposits to the credit of the Interest and Sinking Fund, the City shall transfer from the Net Revenues in the Revenue Fund and deposit to the credit of the Reserve Fund, on the first day of each month, such amounts in equal monthly installments to accumulate within sixty (60) months a sum equal to the Reserve Fund Requirement. The money on deposit in the Reserve Fund may be used to pay the principal of and interest on the Bonds Similarly Secured at any time there are not sufficient funds on deposit in the Interest and Sinking Fund for such purpose.

Improvement Fund

All money remaining in the Revenue Fund at the end of each month after all payments required to be made therefrom in such month have been made and all deficiencies accumulated from prior months have been remedied shall continue to be paid to the Improvement Fund established in connection with the System, and shall be held in and paid out from such Fund for the following purposes:

1. To pay the cost of any special or extraordinary repairs or replacements to or of the properties comprising the System, properly payable with such money under the laws of the State of Texas, necessitated by reason of some emergency.
2. To the extent known or hereafter permitted by law, any lawful purpose.

CAPITAL IMPROVEMENTS AND OPERATING BUDGET POLICIES

The capital improvements budget, operating budget, and budget amendment policies are the same as those used for the Water and Wastewater Utility, as explained on page 68. In addition, the city ordinance that created the Municipal Drainage Utility System also requires that 10% of the System's annual drainage utility fee revenues be used for Green Projects, which are defined as projects that have the potential dual purpose of stormwater management and preservation of the City's open spaces, greenways, arroyos, and wilderness areas in their natural state. This allocation is to be included in the Utility's Capital Improvements Program every year.

REVENUE POLICY

The revenue policy for the Stormwater Utility requires that the PSB maintain fees sufficient to produce revenues in each fiscal year an amount adequate to pay all expenses incurred for the operation and maintenance of the System as such expenses shall accrue during the year and to produce an additional amount equal to 125% of the aggregate amount required to be paid in such year for principal and interest and redemption premiums on bonds payable. Another financial target that is used in preparing the five-year financial plan is maintaining a 90 to 120-day operating reserve target balance. The Stormwater bond ordinance also provides that the PSB will permit no free stormwater services to be supplied to the City or any other user.

INVESTMENT POLICY

The investment policy to be used by the Stormwater Utility will be the same as the policy for the Water and Wastewater Utility, as described on page 48.

DEBT SERVICE POLICY

Planned fee increases are programmed in the Five-Year Financial Plan and are mainly driven by operating expenses, the capital improvement program, and debt service coverage required both by the revenue bond covenants and by the PSB's benchmarks for financial management. While the revenue bond covenants require debt service coverage of 1.25 times (meaning 125% of the current year's debt service requirements must be available that fiscal year), the PSB's financial benchmark is to maintain as close to a 1.75 to 2.00 times coverage as feasibly possible. The Utility does not have a legal debt limit.

FINANCIAL PLAN

BUDGET TRENDS IN FY 2022 – 2023

The Summer 2022 monsoon season did not cause any major damage to the drainage system, and the Utility was able to continue to repair and rehab the system from the widespread damage caused by the severe and heavy rain and flash flooding the City experienced during the 2021 Summer.

A Blow to the Stormwater System in 2021

In August 2021, our city saw more intense rain events, setting records and further straining our infrastructure. On August 12, a Central El Paso neighborhood was hit by 4.65 inches of rain in an hour; classifying the event as a 500-year storm according to the National Oceanic Atmospheric Administration (NOAA).

Near Fort Boulevard and Alabama Street, runoff from the Franklin Mountains scattered large rocks and debris, damaging property and vehicles. Many parts of the drainage system were overwhelmed by the volume of stormwater. West El Paso was also slammed by six inches of rain over a few days. More than 60 channels, ponds, and drains around the city were damaged or blocked by debris and rocks.

After City Council and public input, the Utility implemented a new plan, and starting in FY 2022-2023, the Utility approved \$70 million for stormwater CIP projects in order to expedite and complete the remaining Stormwater Master Plan projects estimated at more than \$700 million over the next ten years.

Total operating revenues for FY 2022-2023 are projected to come in at 101.1% of budgeted, while operating expenses are projected to be 93%. Over 662 maintenance work orders and 498 service requests were completed throughout the city to address maintenance issues and repairs to the system.

It is estimated that 72% or \$50.5 million will be spent on capital projects in FY 2022-2023. There are multiple projects under design, construction, or in the procurement process. These projects are funded by Stormwater Improvement Funds, Direct Funding Revolving Loan (DFRL), and any remaining funds from prior bond issues. On May 15, 2018, the City of El Paso, as requested by EPWater, approved the establishment of the Municipal Drainage Utility System Revolving Note Program, also known as DFRL, with an available lending capacity of up to \$25.0 million. This program has been used for the interim financing of stormwater capital projects and will expire in the summer of 2023. The Utility will evaluate and select, with the approval of City Council, a new interim financing product during early FY 2023-2024.

The following are examples of Stormwater projects completed or in progress in FY 2022-2023:

Storage

- Carolina Drive Retention Pond
- Memphis Dam (Upper and Lower)
- Morehead Dam (Upper and Lower)

Conveyance

- Stevens Street Alley Storm Drain
- Corrugated Metal Pipe Replacement Program
- Mesa Street Drainage Improvements-Texas to Mills
- Tobin Channel Improvements

FY 2023 – 2024: MEETING FUTURE DEMANDS

The FY 2023-2024 budget reflects the priorities for the Stormwater Utility, which include maintenance, design, construction, and the environment. The operating budget continues to focus on year-round preventative maintenance and responding to storm-related events.

EPWater is committed to incorporating environmental stewardship into the management of stormwater. The use of concrete will be minimized, and arroyos purchased by the Utility will be maintained in their natural state as much as possible. By City Ordinance, ten percent of the revenues from stormwater fees will be used for projects that combine stormwater management with the preservation of open spaces, wilderness areas, and park ponds.

BASIS OF BUDGETING

The budget was prepared using the accrual basis of accounting. Revenue is recognized as it is earned, and expenses are recognized as goods or services when delivered. The Utility's funds are not appropriated; rather, the budget is an approved plan that can facilitate budgetary control and operational evaluations. The Utility

defines fund equity as net position, which equals assets minus liabilities and deferred inflows of resources. Net position is divided into four categories; net invested in capital assets, restricted for construction and improvements, restricted for debt service, and unrestricted. The Utility's funds are not appropriated; rather, the budget is an approved plan that can facilitate budgetary control and operational evaluations.

BASIC ASSUMPTIONS

The following basic assumptions were used in the financial plan:

Customer growth rate.....1.2%
 Operations and Maintenance growth rate....1.0% (of operating budget)
 Contingencies..... 5.0% (of operating budget)

FY 2023-2024 DETAIL BUDGET

The Fiscal Year 2023-2024 budget reflects the PSB's updated Strategic Plan goals and objectives and is a balanced budget. The operating budget has been funded to maintain the level of service achieved in previous years, with adjustments made to better reflect the actual expenditures in FY 2022-2023.

The operating budget for the Stormwater Utility is \$7.4 million. However, also included in the Stormwater budget is an indirect cost allocation of \$2.3 million for the support services that will be provided by personnel whose costs are in the Water and Wastewater budget, which brings the total operating budget to a total of \$9.7 million.

The following table summarizes the budget:

STORMWATER OPERATING BUDGET	FY 2023-2024
Maintenance	\$4,346,000
Personnel Services	1,737,100
Utilities	131,300
Materials and Supplies	60,700
Transportation, tipping fees, rent, uniforms, and professional services	1,087,900
O&M Before Indirect Cost Allocation	7,363,000
Indirect Cost Allocation	2,385,000
GROSS OPERATING BUDGET	\$9,748,0000

The following table summarizes the staffing for the Stormwater Utility in the FY 2023-2024 budget:

FUNCTIONAL CATEGORY	TOTAL STAFF
Operations and Maintenance	45
Technical Services	11
TOTAL	56

The FY 2023-2024 capital budget focuses on the construction of projects identified in the revised Stormwater Master Plan as the highest priority. The following list describes the major projects included in the FY 2023-2024 budget:

- \$34.9 million for improvements to stormwater storage capacity, which includes \$5.5 million for the Will Ruth Pond project, \$4.2 million for Palisades Stormwater System, and \$7.6 million for the Americas 10 Watershed Improvements.
- \$20.6 million in conveyance improvements, which includes \$5.9 million for the Stormwater and Development of Natural Space, and
- \$8.5 million for the citywide land acquisitions needed for new stormwater infrastructure.

The capital budget includes 10% of revenue for the acquisition of open space, preservation of arroyos, and development of parks/ponds. The five-year financial plan, on page 241, reflects the plan for capital improvements stated above.

There was a 15% fee increase budgeted for FY 2023-2024, and the Utility expects to meet the operating, maintenance, debt service, and capital infrastructure projects needs of the stormwater system. Over the next ten years, the Utility plans include \$700 million of improvements to the stormwater infrastructure.

REVENUES AND OTHER FINANCING SOURCES

Stormwater Fees – Stormwater fees are funds generated for providing stormwater management to customers. Stormwater revenue for FY 2023-2024 is estimated to be \$33.8 million, \$5.2 million more than the previous year's budgeted revenue, which reflects a 15% fee increase and normal customer growth.

Miscellaneous – This category includes miscellaneous service charges and interest income. For FY 2023-2024, \$1.1 million is estimated to be generated from these sources of revenue, including \$460,000 from interest earnings and \$603,000 in service charges.

Debt and Restricted Funds Proceeds – These are restricted funds available from cash funding available for CIP, from proposed and previously issued bonds, interim financing used to finance the capital improvement program. For FY 2023-2024 the Utility budgeted \$60.4 million from these sources of funds.

EXPENDITURES AND OTHER FINANCING USES

Operating – This category includes expenditures for the operation and maintenance costs of the Utility. It includes salaries, materials and supplies, utilities, disposal fees, and all other expenses. Also included in this category is an allocation of indirect costs for support services provided by the Water and Wastewater Utility staff. Operating and maintenance expenses for FY 2023-2024 are estimated to be \$9.7 million. This is \$575,000 more than the prior year.

Capital – Capital expenses include all expenditures for the planning, design, construction, rehabilitation, project land

acquisition, or purchase of assets. Total estimated capital expenditures for FY 2023-2024 are \$70.0 million. \$70 million annually is estimated to be spent over the next ten years to complete all remaining Master Plan projects.

Debt Service – Principal and interest payments on bonds issued and interest on interim financing of \$14.3 million are estimated for FY 2023-2024.

Contingency – This category allows for unusual, unbudgeted expenses, equivalent to 5% of the operating budget. The contingency this year is \$487,000.

DEBT SERVICE

The following chart shows, as of February 28, 2023, all outstanding principal and interest owed by the Stormwater Utility. In May 2022, Fitch Ratings affirmed the AA+ ratings for all outstanding debt. In April 2022, the Utility issued \$9.5 million Bonds Series 2022, through a private placement with the Texas Water Development Board through the Flood Infrastructure Program to fund the Will Ruth

Pond project. In June 2022, EPWater issued \$23.8 million of bonds, Series 2022A, to take long \$25.0 million of Direct Fund Revolving Notes. The new debt service associated with the two bond issues completed last fiscal year has been included in the FY 2023-2024 budget. In FY 2023-2024, the Utility budgeted \$56.8 million in new funding from DFRL and a new interim financing product for CIP projects.

STORMWATER BILLING FEE

In the past, stormwater services were funded by the City's general fund; however, after the recommendation from the consulting firm, a separate user fee to fund stormwater management functions was established. The fee structure was also determined by the Utility's Public Working Committee, made up of over 20 individuals representing various organizations throughout the city. The fee is based on impervious area square footage. Non-residential properties are charged according to the number of impervious areas, including paved parking lots and other areas that are impermeable to rainwater. On an annual basis, El Paso Central Appraisal District data is used to recalculate fees for residential properties, and fees are adjusted accordingly. The impervious area calculations are based on the ground floor of the house, garages, porches, patios, and any additional buildings, storage sheds, or other areas that are impermeable to rain. Turf, xeriscape areas, driveways, walkways, and sidewalks are not included.

Residential properties are placed into one of three categories based on impervious area square footage. Approximately 80% of residential properties are in the typical category, which includes parcels with impervious areas measuring between 1,201 and 3,000 square feet. Properties less than 1,200 square feet are considered small, and those greater than 3,000 square feet are considered large for fee purposes.

Stormwater fees were increased by nine percent in the FY 2023-2024 budget. The rate structure is as follows:

Residential Properties: (Including duplexes and triplexes)

Residential	Impervious Area	Monthly Charge
Small	0 – 1,200 sq. ft.	\$2.83
Typical	1,201 – 3000 sq. ft.	\$5.66
Large	3,001 sq. ft. +	\$11.30

Residential customers can look up the square footage of their property by going to the Central Appraisal District website.

Non-Residential Properties:

Non-residential properties are charged according to the number of impervious areas, including paved parking lots and other areas that are impermeable to rainwater. For each unit or 2,000 square feet, the charge will be \$5.76. For example, a 4,000-square-foot office building with a 2,000-square-foot paved parking lot will pay \$17.28 monthly.

Non-Residential	Units of Measurement	Monthly Charge
All	Each 2,000 sq. ft. of impervious area	\$5.76

NEW FUNDING REQUEST - STORMWATER

FISCAL YEAR 2023-2024

PROGRAM: Silver Springs Dam		R020022
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Improvements to the existing dam to give it a natural appearance.	
Total Funding Request	\$121,000	
Funding Sources	SWCI	
FY 2023-2024 Projected Expenditures	\$200,000	
Total Project Cost	\$2,328,000	
Impact on Operating Budget	No	

PROGRAM: Pico Norte Pond Restoration		R020027
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Construction of concrete lining on the north portion of the pond.	
Total Funding Request	\$2,650,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$2,650,000	
Total Project Cost	\$3,047,000	
Impact on Operating Budget	Yes	

PROGRAM: Palisades Stormwater System		R020029
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Design and construction of Palisades Stormwater System	
Total Funding Request	\$9,128,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$4,200,000	
Total Project Cost	\$12,330,000	
Impact on Operating Budget	Yes	

PROGRAM: Will Ruth Pond		R020031
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Design and construction of a new stormwater storage structure.	
Total Funding Request	\$11,845,000	
Funding Sources	SWCI - \$1,000,000	
	DFRL - \$10,845,000	
FY 2023-2024 Projected Expenditures	\$5,500,000	
Total Project Cost	\$36,400,000	
Impact on Operating Budget	Yes	

NEW FUNDING REQUEST - STORMWATER

FISCAL YEAR 2023-2024

PROGRAM: Schuster School Park-Pond		R020032
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Design and construction of a park pond to capture stormwater runoff.	
Total Funding Request	\$160,000	
Funding Sources	SWCI	
FY 2023-2024 Projected Expenditures	\$160,000	
Total Project Cost	\$3,350,000	
Impact on Operating Budget	No	

PROGRAM: Various Dam Improvements		R020033
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Upgrades/improvements to various dams located city wide.	
Total Funding Request	\$759,000	
Funding Sources	SWCI	
FY 2023-2024 Projected Expenditures	\$895,000	
Total Project Cost	\$2,026,000	
Impact on Operating Budget	No	

PROGRAM: Americas 10 Watershed Improvements		R020035
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Land acquisition, planning and design of improvements to Americas 10 watershed.	
Total Funding Request	\$7,533,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$7,600,000	
Total Project Cost	\$19,340,000	
Impact on Operating Budget	Yes	

PROGRAM: Dam 6 Upgrade – Scenic Dam		R020050
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Construction of upgrades to the existing Scenic Dam.	
Total Funding Request	\$5,890,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$2,950,000	
Total Project Cost	\$6,318,000	
Impact on Operating Budget	Yes	

NEW FUNDING REQUEST - STORMWATER

FISCAL YEAR 2023-2024

ROGRAM:	Dam 7 Upgrade (Dallas-Tremont St)	R020051
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Construction of upgrades to the existing Tremont Dam.	
Total Funding Request	\$1,801,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$450,000	
Total Project Cost	\$1,883,000	
Impact on Operating Budget	No	

ROGRAM:	SAC 1 Detention Basin	R020057
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Design of the SAC 1 Detention Basin part of the Americas 10 Dam Improvements	
Total Funding Request	\$1,220,000	
Funding Sources	SWCI	
FY 2023-2024 Projected Expenditures	\$860,000	
Total Project Cost	\$10,110,000	
Impact on Operating Budget	Yes	

ROGRAM:	Justus Pond Phase II	R020066
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Land acquisition for the construction of a newly stormwater pond	
Total Funding Request	\$1,850,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$1,850,000	
Total Project Cost	\$8,650,000	
Impact on Operating Budget	Yes	

ROGRAM:	John T. Hickerson WWTP Stormwater Basin	R020069
PROGRAM CATEGORY	STORAGE	
DESCRIPTION	Design and construction of a series of stormwater basins.	
Total Funding Request	\$4,900,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$2,250,000	
Total Project Cost	\$5,280,000	
Impact on Operating Budget	Yes	

NEW FUNDING REQUEST - STORMWATER

FISCAL YEAR 2023-2024

PROGRAM:	City of El Paso CDB Paving Projects	R040084
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Rehabilitation and/or relocation of stormwater structures as part of City of El Paso's paving projects.	
Total Funding Request	\$1,719,000	
Funding Sources	SWCI	
FY 2023-2024 Projected Expenditures	\$2,040,000	
Total Project Cost	\$3,794,000	
Impact on Operating Budget	No	

PROGRAM:	CONVEYANCE	R040085
PROGRAM CATEGORY		
DESCRIPTION	Land acquisition for various projects: Arroyo 1a, AVISPA Canyon, Canterbury Arroyo, Cement Lake and TIRZ 12.	
Total Funding Request	\$3,377,000	
Funding Sources	OPEN SPACE	
FY 2023-2024 Projected Expenditures	\$5,903,000	
Total Project Cost	\$18,803,000	
Impact on Operating Budget	No	

PROGRAM:	Mesa St. and Brentwood Storm Improvements	R040098
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Design and construction of a stormwater system.	
Total Funding Request	\$309,000	
Funding Sources	SWCI	
FY 2023-2024 Projected Expenditures	\$628,000	
Total Project Cost	\$730,000	
Impact on Operating Budget	No	

PROGRAM:	Corrugated Metal Pipe (CMP) Replacement Program	R040118
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Planning, design, and construction to replace corrugated metal pipe at various locations.	
Total Funding Request	\$1,200,000	
Funding Sources	SWCI - \$197,000 DFRL - \$1,003,000	
FY 2023-2024 Projected Expenditures	\$1,200,000	
Total Project Cost	\$7,664,000	
Impact on Operating Budget	No	

NEW FUNDING REQUEST - STORMWATER

FISCAL YEAR 2023-2024

PROGRAM: Krupp St. Drainage Improvements		R040136
PROGRAM CATEGORY	CONVEYANCE	
DESCRIPTION	Design and construction of a stormwater system.	
Total Funding Request	\$1,700,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$850,000	
Total Project Cost	\$1,830,000	
Impact on Operating Budget	No	

PROGRAM: Drainage Studies Citywide FY 23/24		R040160
PROGRAM CATEGORY	STUDIES	
DESCRIPTION	Development of unplanned drainage studies citywide.	
Total Funding Request	\$1,000,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$1,000,000	
Total Project Cost	\$5,000,000	
Impact on Operating Budget	No	

PROGRAM: City Wide Land Acquisition		R080036
PROGRAM CATEGORY	OTHER MAJOR CAPITAL PROJECTS	
DESCRIPTION	Acquisition of land for stormwater projects.	
Total Funding Request	\$8,500,000	
Funding Sources	DFRL	
FY 2023-2024 Projected Expenditures	\$8,500,000	
Total Project Cost	\$36,720,000	
Impact on Operating Budget	No	

PROGRAM: Monsoonal Emerging Projects		R080039
PROGRAM CATEGORY	OTHER MAJOR CAPITAL PROJECTS	
DESCRIPTION	Evaluation, design and/or construction of unplanned improvements.	
Total Funding Request	\$500,000	
Funding Sources	SWCI	
FY 2023-2024 Projected Expenditures	\$500,000	
Total Project Cost	\$3,747,000	
Impact on Operating Budget	No	

NEW FUNDING REQUEST - STORMWATER

FISCAL YEAR 2023-2024

PROGRAM: Beautification of Stormwater Structures		R080043
PROGRAM CATEGORY	OTHER MAJOR CAPITAL PROJECTS	
DESCRIPTION	Planning, design, and construction of rock walls around ponds.	
Total Funding Request	\$1,050,000	
Funding Sources	SWCI	
FY 2023-2024 Projected Expenditures	\$1,050,000	
Total Project Cost	\$4,700,000	
Impact on Operating Budget	No

BUDGET TO ACTUAL AND BUDGETED PERSONNEL

220 TECHNICAL SERVICES**STORMWATER****FUNCTION:**

Design, coordinate, and manage in-house stormwater engineering projects and studies. Coordinate and review drawings from developer's consulting engineers, the City of El Paso planning department, the Texas Department of Transportation (TXDoT), and other agencies. Maintain record drawings and provide technical comments for new developments (stormwater designs for subdivisions and relocations).

Develop and maintain technical design criteria, procedures, and drawing standards for the preparation of construction documents for drainage conveyance, storage, pumping, and control structure improvements.

Negotiate, administer, and manage all consulting contracts for planning, pre-design, design, and construction of stormwater capital improvement projects. Provide engineering and technical support to stormwater operations. Oversee adherence to divisional policies, city, state, and federal regulations and assist in formulating, maintaining, and executing EPWater's stormwater master plan and related watershed studies.

KEY TERMS

APPENDIX

ACCOUNTING PERIOD

An established range of time over which business transactions are performed, aggregated, and analyzed into financial statements

ACCRUAL

Basis of accounting method in which revenue or expenses are recorded when the transaction occurs versus when the cash is paid or received. (Cash Basis)

AGUACARES

A partnership between EPWater and Project Amistad to provide customer assistance to seniors (65+) facing financial hardship and are at risk of being disconnected from water service.

APPROPRIATION

Authorization approved by a legislative or other oversight body to incur liabilities for purposes specified in the appropriation act or other enabling legislation.

ASSET

A resource of monetary value, tangible or intangible, such as cash, property, equipment, and property rights, is owned by a person or entity.

AUDIT

An official inspection of an individual's or organization's accounts, typically by an independent body.

BALANCE BUDGET

A balanced budget occurs when revenues are equal to or greater than total expenses.

BOLSON

An underground natural reservoir of water, a.k.a. an aquifer. For the EPWater service area, the Hueco Bolson is the groundwater source of supply for east El Paso. The Mesilla Bolson is the groundwater source of supply for west El Paso. "Bolsón" is the Spanish word for "pocket."

BOND

A written promise to repay an agreed-upon amount of principal and interest on the principal over a predetermined period. EPWater generally issues bonds collateralized by and repaid from operating revenues.

BOOSTER PUMP STATION

A pumping facility, generally for a water line, which

is usually used to boost the pressure in that line, is known as a force main.

BRACKISH GROUNDWATER

Water that is high in total dissolved solids (TDS).

BUDGET

A financial plan for the appropriation of estimated revenues and planned expenditures for a given period and the associated financial implications associated with it.

CAPITAL IMPROVEMENT PROGRAM (CIP)

Plan to improve existing assets or add new ones over time. Financed separately from the operations and maintenance budget.

COLLECTION SYSTEM

The aggregate of all assets that gather raw wastewater and return it to a treatment plant.

COMMERCIAL PAPER

A short-term financial instrument used specifically for capital projects allows for very favorable interest rates and matures from one to 270 days from sale.

ANNUAL COMPREHENSIVE FINANCIAL REPORT (ACFR)

Governmental unit's yearly report prepared and published as a matter of public record, to include general purpose financial statements, schedules, tables, and notes as required by GASB.

CREDIT RATING

The creditworthiness of an entity as determined by professional independent rating agencies. The Utility is rated by Standard & Poor's and Fitch Investors.

DEBT SERVICE

Expenditures for the repayment of the principal and interest on the principal on bonds and other instruments of borrowing.

DEFICIENCY

A lack or shortage.

DEPRECIATION

A reduction in the value of an asset over time is due, in particular, to use, wear and tear.

DESALINATION

The removal of sufficient salts from water to make it potable.

KEY TERMS

APPENDIX

DISTRIBUTION SYSTEM

The aggregate of all assets that allows treated water to be made available to customers.

DIVISION

An organizational component that reports to Management, EPWater uses division as the GASB equivalent of a program.

ENCUMBRANCE

The recording of an obligation, in the form of a purchase order, contract, or other commitment, to be charged against an appropriation, and for which part of that appropriation is reserved to honor the obligation and ceases to be an encumbrance when the obligation is paid or otherwise extinguished.

ENTERPRISE FUND

Used to account for operations that are financed and operated similar to a private business enterprise, where the governing body intends that the costs (including depreciation) of providing goods and services to the general public are continually financed by or recovered primarily through user charges.

EXPENDITURE

The outlay of cash from the Utility's assets to honor an obligation for a good, service, or debt.

FISCAL YEAR

The twelve-month period begins March 1 and ends the last day of February of the following calendar year.

FIVE-YEAR PLAN

A financial planning document to allow the President and CEO and the PSB to plan levels of expenditures and determine rate and fee schedules to generate necessary revenues. The Five-Year Plan begins with the proposed budget year and is updated annually.

FULL FAITH AND CREDIT

A pledge of the general rate-setting entity for the payment of debt obligations.

FULL-TIME EQUIVALENT

A unit of measurement equal to one employee working a full-time job over a specified period and used to determine statistics such as productivity per full-time employee.

FUND

A sum of money saved or made available for particular purposes.

GOAL

The long-term, attainable target for an organization or a vision of the future.

GRANT

The contribution of one governmental unit to another, in the form of assistance and/or direct financial contribution and may or may not have restricted uses to attain its goals.

GROUNDWATER

Water from below ground, such as from a bolson.

IMPERVIOUS AREA

An area that cannot be penetrated by rain and, as a result, causes rain runoff.

INCOME

Enterprise fund's excess of revenues earned over expenses incurred for the enterprise's operations.

LIABILITY

An amount owed, either currently or some time into the future, by a person or entity.

LIFT STATION

A pumping facility is generally for a sewer line, which is usually used to lift the raw wastewater to a higher elevation so that gravity can take it further down the line, known as a gravity main.

MANAGEMENT

The President and CEO, the President's staff (including the Vice President of Operations & Technical Services, Vice President of Strategic, Financial & Management Services, Chief Communication & Government Affairs Officer, General Counsel, Assistant General Counsel, Water Resources Manager, Utility, Land & Water Rights Manager, Human Resources Manager, Information Systems Manager, Executive Assistant to President/CEO).

MAQUILADORA

An industrial / manufacturing factory that operates a plant on both sides of the U.S.-Mexico border.

OBJECT

Classification of an expenditure describing what type of good or service the expenditure was made.

KEY TERMS

APPENDIX

OBJECTIVE

Specific, measurable, and observable results of an organization's activities that advance toward its goal(s).

PERFORMANCE MEASURE

Metric by which the Utility's organizational units can evaluate service efforts and accomplishments of established goals, with emphasis on quantifiable concepts.

POLICY

A plan, course of action, or guiding principle is designed to set parameters for its decisions and actions.

PROPRIETARY FUND

The fund is used in governmental accounting to account for activities that involve business-like interactions, either within the government or outside of it.

RECLAIMED WATER

Wastewater undergoes advanced secondary or tertiary treatment processes. Non-potable, but usable for very large user consumption for irrigation or some industrial purposes. A.K.A. "gray water" or reuse water.

RESERVOIR

A structure for physically storing water.

NET POSITION

The difference between an entity's assets plus deferred outflows of resources and its liabilities plus deferred inflows of resources represents its net position. Net position has the following three components:

- net investment in capital assets;
- restricted net position; and
- unrestricted net position.

SECTION

An organizational subcomponent that reports to a Division. EPWater uses section as the GASB equivalent of an organizational unit.

STORMWATER

Water on the surface originated from precipitation.

STRATEGIC PLAN

Approved by the PSB in 1997-98, it identifies internal and external factors having an impact on the future of EPWater, determines likely effects, and devises a proactive plan to address each factor on a priority

basis over short, medium, and long-term planning horizons.

SURFACE WATER

Water from above ground, such as from the Río Grande.

SYSTEM

The total of all assets the Utility uses for distribution, collection, treatment, and provision of services.

TOTAL QUALITY MANAGEMENT (TQM)

The approach in which an organization seeks to continuously improve its ability to meet or exceed customer (external and internal) demands.

USER CHARGE

Revenue is generated by payment for a good or service from the consumer of the good or service, as opposed to revenue generated by a tax or some other method.

VOUCHER

A written document that evidences the propriety of transactions and usually indicates the accounts in which they are to be recorded.

WELL

A pumping structure for collecting groundwater.

XERISCAPE

The principles of this landscaping technique are planning and design, soil, turf, plants, irrigation, mulches, and maintenance.

ACRONYMS

APPENDIX

AFY

Acre feet per year. An acre-foot covers 1 acre of land 1 foot deep and is equivalent to 325,850 gallons of water.

AMWA

Association of Metropolitan Water Agencies

ARRA

American Recovery & Reinvestment Act

AWC

Average winter consumption. Average of billed water for the previous December, January, and February for a given customer account and the metric against which consumption is measured for all other months.

AWWA

American Water Works Association

BAB

Build America Bond

BECC

Border Environmental Cooperation Commission

BOD

Biochemical Oxygen Demand

CAA

Clean Air Act of 1955, 42 USCA § 7401 as amended

CCF

Hundred cubic feet (1 CCF of water = 748 gallons)
Unit of measurement of customer water consumption

CHIWAWA

Consortium for Hi-Technology Investigations in Water and Wastewater

CIS

Customer information system

COLA

Cost of living adjustment

COVID-19

A pandemic, also known as the coronavirus pandemic, disease caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), first identified in December 2019 in Wuhan China

CPA

Certified public accountant

EPA

Environmental Protection Agency

EPCWID #1

El Paso County Water Improvement District, or the "Irrigation District," with which the Utility has an agreement to receive an allotted amount of surface water each year

EPWU

El Paso Water Utilities ("the Utility")

FTE

Full-time equivalent. A part-time position converted to the equivalent of a full-time position based on a budgeted 2080 hours per year

GAAP

Generally Accepted Accounting Principles. Uniform minimum standards and guidelines for disclosing, recording, and reporting financial transactions and entries

GAC

Granular activated carbon, key filtration chemical in water treatment

GASB

Governmental Accounting Standards Board. Independent accounting standards-setting board for the public sector and not-for-profit entities

GFOA

Government Finance Officers Association

GIS

Geographic information system. The use of topographical information, orthophoto graphic imaging, and digital renderings of land and property for planning and data management

GPCD

Gallons per capita per day

HUB

Historically underutilized business (see also **MBE/WBE**)

IBWC

International Boundary and Water Commission

ACRONYMS

APPENDIX

JMAS

Junta Municipal de Aguas y Saneamiento (the Juárez, Chih., México Water Utility)

LF

Linear feet

LIMS

Laboratory information management system

LVWD

Lower Valley Water District

MBE/WBE

Minority or woman-owned business enterprise. EPWater actively encourages historically underutilized or M/WBE's to participate in all bidding processes offered and awarded by the PSB

MCL

Maximum contaminant level

MGD

Million gallons per day. Unit of measurement for treatment plants

MUD

Municipal utility district

NACWA

National Association of Clean Water Agencies

NADBank

North American Development Bank. Created as a multilateral assistance-providing entity for border areas affected by NAFTA

NAFTA

North American Free Trade Agreement

P.E.

"Professional Engineer" certification

PPB Parts per million

PSB

Public Service Board. Citizen's group which oversees El Paso Water is composed of six U.S. citizens residing in El Paso County and the Mayor of the City of El Paso. All members except for the Mayor, receive a nominal fee for attendance of regularly scheduled meetings

SCADA

Supervisory Control and Data Acquisition system. Allows remote and instantaneous monitoring of distribution and collection systems

SDWA

Safe Drinking Water Act of 1974, PL 93-523, as amended

SIU

Significant industrial user, as defined by EPA

SRF

State Revolving Fund. Low-cost loans offered by states in conjunction with the EPA

TBLL

Technically based local limit

TDS

Total dissolved solids. Unit of measurement of water quality

TIP

Transportation Improvement Program of the State of Texas

TCEQ

Texas Commission of Environmental Quality

TSS

Total Suspended Solids

TTHM

Total Trihalomethanes

TWDB

Texas Water Development Board

TXDOT

Texas Department of Transportation

USEPA

United States Environmental Protection Agency

USGS

United States Geological Survey

UTEP

The University of Texas at El Paso

WRP

Water reclamation plant

ACRONYMS

APPENDIX

WSRC

Water supply replacement charge. Adopted to allow the financing of the cost of attaining future water supplies in lieu of impact fees

WTP

Water treatment plant

WWTP

Wastewater treatment plant

GUIDE TO OPERATING BUDGET ACCOUNTS**APPENDIX****PERSONNEL SERVICES****7010 Capital Salaries and Wages**

Regular and overtime wages incurred by the section on work performed for capital projects, maintenance & operations jobs, and work performed for other sections.

7020 Operations & Maintenance Salaries and Wages

Regular and overtime wages incurred by section in performing normal duties. Regular wages are for full-time equivalent budgeted positions, based on a 40-hour workweek plus an additional load to cover included benefits. Only scheduled standby and holiday overtime are budgeted.

7400 Meeting Fees

Public Service Board members receive \$20 per meeting for their attendance.

7750 Worker's Compensation

The actual cost to the Utility for medical, administrative, and other costs incurred for work-related employee injuries.

MATERIALS & SUPPLIES**7070 Public Service Board Grants**

Grants awarded by PSB to agencies and individuals, usually for conservation-related projects

7080 Water Purchased for Resale

Expenditures for wholesale water purchases.

7240 Laboratory Supplies & Testing

All expenditures associated with lab and mini-lab operations, except for wages and equipment purchases over \$25,000.

7310 Water Supply for Desalination

All expenditures associated with the water supply for the Desalination Plant.

7390 Water Supply by EWM

All expenditures associated with a purchase from the Utility for the returned potable water produced by Enviro Water Mineral Company (EWM).

7500 Chemicals

Expenditures for chemicals required for the section's treatment processes and operations.

7550 Public Affairs Expense

Expenses associated with public education campaigns, special events, and interaction with the public, including the media.

7560 Office Supplies & Printing

Expenditures for all office supplies, outsourced printing, and new equipment and furniture purchases under \$25,000.

7620 Small Tools & Equipment

Expenditures for items under \$25,000 required for the section's operations to include but are not limited to power tools, brooms, mops, ladders, lawnmowers, wrench sets, flashlights, pliers, channel locks, tape measures, levels, trowel, chisels, hacksaws, picks, buckets, equipment blades, toolboxes, etc.

7740 Rental of equipment

Expenditures for the rental or lease of equipment.

MAINTENANCE**7090 Water Rights Land Expense**

Operating expenditures associated with the use of water rights land, and conveyance canals.

7280 Manhole Expense

Expenditures incurred maintaining manholes, including capital salaries and vehicles and equipment use.

7330 Emergency Response

Operating expenditures associated with emergency response to stormwater management, including contracted or internal labor, materials, and equipment.

7340 Maintenance of Basins, Ponds, and Dams

Operating expenditures associated with the maintenance of basins, ponds, and dams for stormwater management, including contracted or internal labor, materials, and equipment.

7350 Maintenance of Channels, Ditches, Conduits

Operating expenditures associated with maintenance of channels, ditches, and conduits for stormwater management, including contracted or internal labor, materials, and equipment.

GUIDE TO OPERATING BUDGET ACCOUNTS**APPENDIX****7360 Maintenance of Pump Stations**

Operating expenditures associated with the maintenance of pump stations for stormwater management, including contracted or internal labor, materials, and equipment.

7380 Landscaping

Expenditures associated with maintaining the grounds at EPWater facilities.

7660 Building Supplies and Services

Expenditures for all building maintenance-related costs at all EPWater facilities. This includes any expenses on any asset inside the main building, such as janitorial services, elevator maintenance agreements, door locks, pest control, roof or air conditioning repairs, and security cameras. Also included are any expenses for cleaning materials, bathroom, and kitchen supplies. Expenses to operations facilities other than the central building, such as lift stations, wells, etc., will be charged to one of the other appropriate maintenance accounts.

7680 Communication Equipment

Cost of using and maintaining all portable communication equipment, including cellular phones, pagers, and two-way radios, and the purchase of new items under \$25,000.

7850 Maintenance of Equipment

Expenditures related to the operation and maintenance of equipment necessary for operations. Includes all fossil fuels other than natural gas intended for use in generators, engines, or other equipment, and repairs, maintenance agreements, modifications, replacements, and the labor to do so. Replacement or upgrade of equipment may be considered a capital improvement if costs are significant.

7860 Maintenance of Services

Expenditures incurred from maintaining customer service connections, including labor, materials, and equipment.

7870 Maintenance of Fire Hydrants

Expenditures incurred from maintaining fire hydrants, including labor, materials, and equipment.

7880 Maintenance of Mains

Expenditures incurred from the maintenance of water or sewer mains, including labor, materials, and equipment.

7900 Maintenance of Meters

Expenditures to maintain and repair installed meters.

7910 Maintenance of Office Furniture & Equipment

Expenditures for all maintenance of office equipment and furniture, including service agreements, repairs, and modifications. The purchase of new equipment should be charged to account 7560.

7930 Maintenance of Structures & Improvements

Expenditures for maintaining all structures other than the main facilities, including assets on facility grounds but not part of the main building (ex., a fence) and other developed PSB properties.

7940 Maintenance of Data Processing Equipment

Expenditures associated with all information systems hardware not included as "office equipment."

7950 Maintenance of Cathodic Protection

Expenditures incurred by maintaining all cathodically protected distribution system assets.

UTILITIES**7040 Fuel Expense**

Expenditures for all fossil fuels other than natural gas intended for use in generators, engines, or other equipment.

7060 Electricity Expense

Expenditures for electricity used in normal operations.

7710 Natural Gas Expense

Expenditures for natural gas used in normal operations.

7760 Utilities

Expenditures for all other utilities in normal operations, such as sanitation, land-line telephone service (local and long-distance), system consumption of water and sewer services, and stormwater.

MISCELLANEOUS**7050 Audit Services**

Expenditures related to annual external audits and any other management requested audits.

GUIDE TO OPERATING BUDGET ACCOUNTS

APPENDIX

7070 Public Service Board Grants

Grants are awarded by P.S.B. agencies and individuals, usually for conservation-related projects.

7100 Rent

These expenditures are solely incurred by sections in the Administrative Office building to pay for the Building Maintenance section's operating expenditures.

7110 Water Conservation Expense

Expenditures incurred by all conservation-related operations, such as programs, media buys, water conservation marketing items, educational materials, and event appearances.

7120 Transportation - Expenditures incurred by sections with vehicles to pay for operations (fuel) and maintenance and repair of those vehicles.

7130 Cash Management - Expenditures related to all bank service charges and account management fees.

7260 Expense of Supervisor & Employee

Expenditures for staff travel and training, education, individual membership fees, business cards, subscriptions, tuition reimbursements, and professional certifications.

7270 Law Library

Expenditures by Legal Services for all legal-related material needed to update the law library.

7320 Lease of Land

Expenditures are related to the lease of land.

7370 Disposal Fees

Expenditures related to the disposal of accumulated trash and waste while maintaining basins, ponds, dams, channels, ditches, and conduits.

7420 Postage

Expenditures associated with mail, including envelopes, mass mailing services, and rapid delivery services.

7510 Bid Advertisement Expense

Expenditures are related to the advertisement of construction and goods and services of bids in any

newspaper, periodical, journal, magazine, or publication.

7530 Sludge Disposal/Monofil Management

All costs incurred for transportation of sludge from water and wastewater treatment facilities to the sludge monofil.

7580 Showerhead Replacement Program

Expenses associated with water conservation program to provide free low-flow showerheads to customers during FY 2012-13.

7640 Uniforms and Personal Safety Equipment

Allowance for employee clothing and footwear. Also included are expenses for safety items required to be used in the performance of employee's duties, such as rubber boots, gloves, goggles, insect repellent, sunblock, coveralls, safety vests, hard hats, sun shields, safety glasses, knee pads, bandanas, caps, earplugs, first aid kits, back belts, latex gloves, raincoats, etc.

7700 Insurance

Expenditures for property, casualty, errors, omissions, and other insurance policies purchased by the Utility.

7720 Professional Services

Expenditures made for solicitation of consultants, lawyers, and other professional persons, utility, and professional membership fees.

7730 Special Services

Expenditures for filling special temporary positions (co-ops, VOE's), budgeted temporary help, records management, and honoring unique agreements the Utility or P.S.B. might have with an outside entity.

7770 Security Services and Equipment

Expenditures are related to ensuring the security of EPWater buildings and property. This includes security services and repair or purchase of security equipment under \$25,000.

7780 Miscellaneous Expense

Expenditures that cannot be accounted for by any other operating budget account. Materials used for maintenance of services, mains, buildings, equipment, structures, manholes, and fire hydrants, such as pipe, steel tape, cement, spray paint, safety cones, wood stakes, nails, bushings, etc., should be charged to the appropriate maintenance account (i.e., 7860 Maintenance of Services, 7880

GUIDE TO OPERATING BUDGET ACCOUNTS**APPENDIX**

Maintenance of Mains, etc.). This account is not to be used unless the expense cannot be categorized anywhere else.

7790 Software/Hardware Expense

Expenditures related to the purchase and maintenance of all computer software and hardware used by the Utility.

PERSONNEL SERVICES**9010 Capital Salaries and Wages**

Regular and overtime wages incurred by the section on work performed for capital projects, maintenance & operations jobs, and work performed for other sections.

9020 Operations & Maintenance Salaries and Wages

Regular and overtime wages incurred by section in performing normal duties. Regular wages are for full-time equivalent budgeted positions, based on a 40-hour workweek plus an additional load to cover included benefits. Only scheduled standby and holiday overtime are budgeted.

9750 Worker's Compensation

The actual cost to the Utility for medical administrative and other costs incurred for work-related employee injuries.

MATERIAL & SUPPLIES**9240 Auto Shop Supplies**

All expenditures associated with auto shop operations, except for wages and equipment purchases over \$25,000.

9560 Office supplies & Printing

Expenditures for all office supplies, outsourced printing, and new equipment and furniture purchase under \$25,000.

9620 Small Tools & Equipment

Expenditures for items under \$25,000 are required for the section's operations, to include but are not limited to power tools, brooms, mops, ladders, lawnmowers, wrench sets, flashlights, pliers, channel locks, tape measures, levels, trowel, chisels, hacksaws, picks, buckets, equipment blades, toolboxes, etc.
